THE PASSING SHOW

By J. S. COWPER

There are several versions of "O Canada," but none that closely fits the facts.

The Quebec original is too theological for close transcription to use in other portions of Canada.

The English versions are too loosely phrased for literal acceptance. In ordinary parlance we think of people "standing on guard" as engaged in military defence. Obviously this is not the meaning in the minds of profiteers, sweatshop owners, money barons, protected monopolists, munition contractors and professional patriots when they gather to proclaim "O Canada, we stand on guard for thee."

To assist rhymsters with more time on their hands and more music in their minds than myself, I would like to outline some of the things that should be more clearly defined in any new version, yet to be written, of our melodious National Anthem.

We stand, of course, for handing over to private profiteers the control of the national currency and public credit to dole out or call in as they desire, without regard for the public welfare. There's no need to labor that point.

Arising out of the system of letting private profiteers use the public credit for their own uses, we have large numbers of unemployed in Canada. We stand for a system of herding these men away in celibate cantonments, paying them 20 cents a day pocket-money on the days they turn out to exercise, and getting no useful work from them. There's no need to labor that point, either.

What about those of us who still have salaried jobs and a little money to spend? What do we stand for?

Expressed in figures, we stand for paying 35 per cent more for nearly everything we use for singing "O Canada" than if we sang "My Country, 'Tis of Thee."

This isn't hearsay or guess-work. It's a matter of cold calculation and in part, of sworn evidence given before the Dominion Tariff Board in its public hearings within the past couple of weeks.

I'll quote some of it.

* * *

Have you ever pondered, as I have been pondering of late, over the automobile ads in the magazines from across the border and those in the newspapers of our own country? Did you ever wish that you lived there so that for the price you propose to pay for a cheap car in Canada, you could buy a high-class car over there? I've been looking at the American prices—$510 for a Plymouth; $615 for a Pontiac; $695 for a De Soto; $795 for a Buick; $825 for a Nash; $580 for a La Fayette; $695 for a Hudson; $595 for a Graham; $645 for a Dodge—and so on. They make interesting comparisons with the prices charged for precisely the same cars assembled in factories on this side of the line.

According to evidence given before the Tariff Enquiry last week at Nelson, B. C., Canadians bought 117,000 cars in the year 1934. The lowest difference between the American and Canadian prices was $200. Allowing only $200 per car (the B. C. Economic Council says it should be $300 per car), that meant that Canadians paid more than $23,400,000 above U. S. prices in the year 1934 on automobiles alone, for the privilege of singing "O Canada."

The year 1934 was not a big year in the automobile industry. In 1929 Canadians bought 292,000 cars. That meant not less than $52,000,000 above world prices they paid for singing "O Canada."

* * *

These figures can stand a further paragraph.

In the year 1934 the total salary and wage bill for the entire automobile industry in Canada was less than $18,000,000—according to official sources. This less than 18,000,000 included salaries to executives, office staffs, promotion experts, etc., as well as to the men in the shops and assembly plants.

That means that the people of Canada donated to the Canadian automobile industry the whole of its wage and salary bill, and not less than $5,500,000 as a cash present in addition.

Put it in another way. If Canadians imported cars at world prices they could have afforded in 1934 to have pensioned off every workman, stenographer, clerk, draughtsman, etc., employed in the Canadian automobile industry at full wages, and still have been $5,500,000 better off.

The year 1934 was not a good or even an average year. If the comparison was made for the year 1929 when Canadians paid $52,000,000, above U. S. prices for their cars, and received for it a salary and wage payroll of 33,500,000, we could have afforded to pension off at full salary and wages every person employed from high-priced presidents down to factory boys, and still have been $18,500,000 better off.

How nice it would be to start an industry in any other line as much in demand as automobiles under conditions where the government donated you your entire pay-roll and salary list and gave you in addition from $5,000,000 to $25,000,000 as a cash present.

Wouldn't you sing with heart and voice "O Canada, we stand on guard for thee!"

I'd hoped to find space for a few figures about the gasoline business which has enjoyed very happy times in Alberta under the outgoing government, but it must wait.

The automobile manufacturers aren't the only beneficiaries. Nearly every big business in Canada parasites on the people in the same way.

It wouldn't be so bad if they'd treat us as Chinese or West Indian niggers instead of brother-Canadians. If a Chinese or a West Indian—or any other non-Canadian—wants a Canadian car, the Canadian manufacturer will sell it to him for 17 per cent less than to a Canadian dealer.

It's a great system, my brothers, to make the rich richer and the poor poorer.

A RIGHT TO INQUIRE

A pretty big pebble was tossed into the complacent pool of private arms manufacture when the Senate authorized an investigation into the munitions industry in the United States. And the widening circles have undulated as far as London, where an inquiry into the British armaments business has now been in progress for several weeks.

On Wednesday the Royal Commission in charge of this investigation heard testimony with implications which will bear examination. It was brought out that, "according to returns in Somerset House," British ministers as recently as April 16 were holding shares in private armament firms.

The propriety of financial connections between munitions companies and men whose decisions shape national policy has been questioned before now, and rightly, because of the accompanying possibility that public decisions may be influenced by private considerations.

Of course, personal connections with the arms industry often come about in unexpected ways. The investor who puts his money in a dye company may find he is a partner in a poison gas business. Or he may wish to profit by the development of commercial air transport and find some of his dividends are due to sales of bombing planes to governments. Or he may buy stock in an artificial silk factory and find his fortunes linked with those of a gun-powder producer.

Or he may think of himself as furthering public enlightenment and bolstering a fine sense of patriotism through his investment in a daily paper, only to find that the paper's crusading for adequate national defense may have been partly due to its possession of a large block of stock in a company which manufactured equipment for defense purposes. This possibility was well illustrated in the same hearing at which Cabinet members' arms investments were aired. A paper of wide circulation which campaigned for an increase in defense was shown to have held shares in a company which would benefit from orders for defense equipment.

Statesmen and newspaper owners may rationalize to their own satisfaction circumstances which are less easily explained as the light of publicity shines through them. It may be possible to hold armament shares and still do full duty to a high government post. Sincere convictions of the desirability of increasing the national defense may prompt investments in airplane stock as well as campaigns in the press. But those who must bear heavy taxes on their purses for bigger defense equipment and, in the event the equipment is used, pay tithes with their very lives, have a right to inquire.

ST. ANDREW'S UNITED CHURCH

Rev. R. B. Layton, Minister
Mr. L. D. Wright,
Musical Director

Congratulations go out to the Young People's Society in the victory won by their debaters, Don McFadden and Roger Thompson, over the Calgary team.

June ninth is observed throughout Canada in United Church as the Tenth Anniversary of Union.

Programs will be followed at both services on Sunday. The Senior choir has special music. A Thankoffering will be given.

All members and adherents of the United Church are interested in these services.

India Earthquake Kills 40,000

Quetta, India, May 31—Forty-four attachee of military aerodrome here, including one pilot were killed in an earthquake which shook the Quetta district early Friday. Some reports said casualties in the district would reach 30,000.

The native city, railway station and civil government offices were destroyed in a series of three violent shocks.

Four out of five of the population between Quetta and Kalat, 100 miles to the south, were reported killed.

Reuters quotes the following fragmentary report from the northwest Indian government:

"An appalling earthquake occurred at 3:00 a.m. today at Quetta. Fragmentary wireless reports hitherto received state that the city civil and railway areas have been devastated with it is feared very heavy casualties."

Government offices at Simla are safe.

Relief work in the stricken areas already is under way. A camp has been formed on the racecourse for the homeless and injured and the grounds of the residency were turned over for similar purposes.

Food and medical supplies at first accounts, were satisfactory but authorities asked the Punjab government to rush doctors and nurses to the stricken district.

Among civil servants reported killed are Meredith Jones of the political department, with his wife and mother-in-law; a Mr. Francis, irrigation engineer and his wife. Sir Norman Carter, agent of the governor-general, was reported safe. Other prominent civil officers survived but several reported the loss of children.

The Karachi-India, correspondent of the Exchange Telegraph Agency said Friday that "unconfirmed reports now coming through estimate earthquake deaths at 30,000 in Quetta alone, two-thirds of the population having been wiped out".

On the other hand, the Simla correspondent of Reuters estimated over 1000 deaths at Quetta where most of the police force was said to have been killed.

Every building in the area was either razed or seriously damaged.

The populace of Larkana, Shikarpur and Ratadero spent the remainder of the night in the open, many praying to their Hindu gods.

The quakes were so strong that even birds were thrown from their nests.

EDMONTON BOY KILLED BY CAR

Edmonton—Crushed between two cars a few moments after he had waved goodbye to his monther, Gordon Taunton, nine, died in hospital at noon Thursday, three hours after the accident. Death came as preparations were being hurried for a blood transfusion for the boy.

ONE SUIT OF CLOTHES LASTS FOR MANY KIN

You've heard of the Wonderful one 'hoss' shay," that according to the well-known verse shattered all-time records for horse-drawn vehicles by rolling over the 'ard, 'ard 'ighway for 'a round censury. But here's the story about the wonderful suit of clothes.

The story came out during the hearing of a "suit" for judicial separation before Mr. Justice Lunney in supreme civil court on Wednesday last.

The plaintiff a comely young woman, was reciting the story of her disillusionment to her counsel.

"Did your husband fool you about how he was financially fixed when he married you?" her lawyer asked.

"Yes, he certainly did," was the spirited reply.

"I found out four months after the wedding he borrowed the suit he was married in from his brother. His brother got the suit from his father before that and my husband gave it to his uncle when one of the family died to bury his son in," the outraged plaintiff declared.

"It's a shame that such a durable garment should have had so ignoble an end," counsel for the husband remarked while judge and spectators joined in laughter.

MRS. REED'S RECITAL

Mrs. Reed's piano pupils' recital will be held in the United Church Friday, June 7th at 8:15. Miss Brenda Reed, A.T.C.M., L.R.I.M., medalist for Canada in singing in 1931 will sing. A silver collection will be taken for the choir funds.

Ask Support Against Aberhart Plan

Medicine Hat—Members of the Medicine Hat Chamber of Commerce at Thursday's meeting endorsed a resolution opposing the Social Credit movement as expounded by William Aberhart submitted to them by the Drumheller Board of Trade.

The resolution was endorsed on motion of B. F. Souch, local druggist and member of the senate of the University of Alberta, who declared Social Credit was no "revolutionary" as to remove it from the bounds of ordinary politics. The seconder was Mayor I. Bullifant. The resolution as sent by Drumheller read:

"That the secretary write the boards of trade of Calgary, Edmonton, Lethbridge and Medicine Hat, advising that there is a strong feeling among members of our Board of Trade against William Aberhart's economic movement and inquire from their boards of trade if in the event of he Drumheller Board of Trade taking a stand against the Aberhart economic movement the said boards of trade will support the Drumheller Board of Trade."

The resolution was made without any thought of politics but earnest consideration of every movement which affects the economic welfare of the province or Dominion should be given by all boards of trade, the Drumheller body stated.

Aberhart Scheme Is Unworkable

There is a very noticeable change in the attitude of the people of this part of the Province during the past few weeks. While theAberhart Social Credit scheme swept the country like a prairie fire, and gathered to its ranks a very large number of the people before they had time to think the scheme over, on second thought they are beginning to see the fallacy of the scheme. While everyone recognizes the fact that a change is needed in our economic structure, the Aberhart scheme is not the remedy. With the Provincial Government at the end of its resources; with Alberta bonds practically off the market for the lack of buyers; with thousands of unemployed in the cities because of the inability of those municipalities to procure money for needed public works, the public is beginning to wonder where Aberhart is going to get the money to bring about his great reform. $120,000,000 is a lot of money, and this amount must be in sight before Aberhart can make a move. The scheme does not look reasonable — it is not feasible.

The electors are beginning to realize that the Province has been practically put in bankruptcy by the haphazard manner in which its business has been handled, and that a government that will run the business of the Province along business lines is needed at present. Many are of the opinion that politics should be eliminated entirely, and that a government composed of the very best men procurable should be elected, irrespective of former political alliances. What Alberta needs is a government that will economise in every possible way. Millions of dollars have been wasted in the extravagant conduct of public affairs, and before Alberta can recover this extravagance must stop. The Aberhart scheme could only plunge the Province into greater difficulties and chaos.

U.F. CAUCUS TO SET DATE OF ELECTION

Date of the provincial general election will be set at a caucus of United Farmers of Alberta candidates to be held here following completion of the party nominating conventions, the last of which is carded for June 21 next.

Candidates probably will be summoned for June 21 and 22, at which time the election date will be set.

As the Election Act calls for a minimum of 30 and a maximum of 40 days' notice, it is expected that the election will take place in the last week in July.

The U.F.A. convention dates, with 20 carded in the first three weeks of June, is the most definite move yet made to base the probable election date. Calling the caucus before candidates are nominated is not feasible, and as the candidates are to be brought in as soon after nomination as possible, the probable election date can be more definitely fixed.

On Tuesday a list of 17 conventions was made known and on Wednesday dates for the following were fixed: Lethbridge, June 5; Cardston, June 6; St. Paul, June 20 and Sedgewick, June 21.

EXTREMES MEET

—Edmonton Bulletin—

Mayor McGeer of Vancouver rightly surmises there would be "no reason for international bankers to complain if revolution and chaos should set off the need for a military dictatorship" in Canada.

None whatever. That, in fact, would be a consummation they might devoutly wish for. Whether they know it or not, the professional agitators are playing right into the hands of the money-power, and helping to create the one condition that can rivet private control of money on the people of Canada for the future.

A military dictatorship under any other name would mean the same thing so far as money is concerned. There is in Montreal and in Toronto a very active movement for the establishment of a Union Government at Ottawa, and the mails are carrying streams of clever if unconvincing propaganda to all parts of the Dominion. Thus far there has been little response; save in the way of reminders that Canada once had a Union Government and does not want another.

But should conditions prevailing in Vancouver extend to other cities, with calls for martial law and the forcible preservation of law and order, the Union government movement would be given a prompt and powerful stimulus. And what more could the private controllers of money want or ask for than a Union government created by themselves, named by themselves, and depending upon them for support? There would be no monetary reform under that kind of regime.

But barring such a "coup" monetary reform is plainly in sight whenever the electors are allowed to go to the polls and elect a new parliament. Whoever hopes for a change in our monetary system that will free us from the domination of private control, and make money the servant and not the master of men, must be construed as revolutionary, rebellious, or inciting to violence. That, more surely than anything else, could destroy the hopes of monetary reform within the next four years.

MAY HARD-SURFACE HIGHWAY THROUGH TOWN

The public works department of Lacombe has during the past week conferred with the government with reference to the hard-surfacing of the Avenue and Nanton St., to line up with the Edmonton-Calgary trail. The government we learn is willing to have this work performed, with certain provisos. The most important request the government makes is that the town take steps to keep the streets affected in good shape for the through traffic. Parking laws will have to be amended; the practice of the turning of cars between streets must be prohibited, so that the traffic may come through the town with safety. It is up to the car owners here to see that the rules of the road are strictly adhered to. In the event of the request of the government not being lived up to, it is the intention to hard-surface the continuation of the Edmonton-Calgary highway on the old survey, cutting out the highway through the business part of the town.

CHAS. RIDDOCK FATALLY HURT

Charles Riddock, 65 years, of 1315 Eighth ave. east, well known moving contractor, was almost instantly killed about 7:20 o'clock, Friday morning when a large boiler, which was being moved into the plant of the Co-operative Milk Company, 706 Eleventh avenue west, Calgary, rolled and pinned him against a stationary churn at the rear of the building.

The boiler, which weighed approximately eight tons, was being moved on rollers and was being drawn into place by a rope. Through some mishap the boiler itself rolled and Riddock, who was between it and the churn, was unable to jump clear.

E. H. Starr was immediately called and every effort was made to release the injured man. On arrival of the ambulance Mr. Starr was able to lift him as other workmen pried loose the boiler. He found that life was extinct. Mr. Riddock having been crushed about the chest and abdomen.

So far as could be learned later in the day, Mr. Riddock had been trying to prevent the boiler rolling against some machinery and damaging it.

He had been placing chocks against the boiler, with the assistance of Fred Moore, 322 Eighth avenueeast, to keep it from rolling.

J. J. Mcgridge, chief engineer of the milk company, stated today the boiler had been moved from Vulcan and was being installed under contract with Riddock.

Dr. G. R. Johnson, coroner, was uncertain whether an inquest would be called. He had notified the attorney-general's department of the fatality.

Born in Guelph, Ont., the late Mr. Riddock had been in Calgary for 25 years. Surviving are his wife, Jessie; a daughter, Greta, and a son, Blyth, all in Calgary, five brothers and a sister.

Four brothers, James, Peter, Frank and Robert, live in this district.

There will be, or should be, unanimous approval of the bill before parliament stipulating that the eight-hour day and the forty-four hour week are to apply on all federal public works. That is the rule already in private industry quite generally throughout the west at least. The Government of Canada should lead rather than follow, private employers in cutting down the hours of labor and giving human beings at least that margin of profit from the economy of the machine.

The bill should also provide, if it does not, that wages paid on public works shall everywhere be equal to those paid on provincial public works and equal to the minimum wage law of the province in which the work is situated—where such law has been or may be enacted. In the rate of pay, as in the length of the day, the Dominion should set the pace for local governments, municipalities and private employers.

The first place to apply this bill, including the pay schedule, is in the twenty-cent-a-day camps where single men have been constructing public works for a fraction of what the improvements are worth and should have cost. When parliament undertakes to lay down the law to other employers it should stop exploiting labor itself.

THE CHURCH OF ENGLAND IN CANADA

Diocese of Calgary

St. Cyprian's Church, Lacombe

Incumbent: Rev. T. H. Chapman
Organist: Mrs. L. D. Wright
Friday, 7:30 p.m. Choir Practice.
June 9th, Whit Sunday
10:00 a.m. Sunday School.
11:00 a.m. Morning Prayer and Sermon.
7:30 p.m. Evening Prayer and Sermon.

TO BE KEPT IN MIND: The Ninth Annual Diocesan Summer School will be held at Banff, July 2-6. Application Forms may be obtained from the Rector. These must reach the Secretary in Calgary not LATER than June 25th.

The programme for the Summer School will be as follows:

Tuesday Evening: Supper on arrival (after reporting to Secretary). 9:00 Get-together Gathering in Oddfellows' Hall

Wednesday, Thursday and Friday: Morning Services and Sessions:
7:10, Mattins. 7:30 Holy Communion. 8:30 Breakfast. 10:00-10.45 Bible Study. 11:00-11:45 Young People's Period. 12:00-12:45 Missionary Period
1:00 p.m. Dinner.
Afternoons Free. 6:00-8:00 Supper.
Evening Devotions, Wednesday and Thursday.
Friday, 8:30 Special Evensong.
Saturday morning, 6:40 Mattins.
7:00 Holy Communion. 8:00 Breakfast.

For all other information regarding the Summer School see your Rector, Rev. T. H. Chapman.

The Opportunities Of Youth

Within recent weeks some thousands of young men and women have graduated from Canadian colleges and universities, received their diplomas, and are now ready and anxious to start out in the careers for which they have been fitting themselves. That is, there is a new small army of lawyers, doctors, clergymen, nurses, teachers, chemists, engineers, scientific agriculturists, and others in various lines of activity equipped to assume their share of the world's work. To that work they are prepared to bring not only the enthusiasm and energy of youth, but the very latest knowledge, ideas and methods.

In the course of the next few weeks additional thousands of young men and women will emerge from normal schools, collegiates and high schools, not quite so highly trained, but who do not aim at a university degree, or who cannot afford the time and expense which years in college will entail. These, too, are ready and anxious to assume a place in the world's work.

Many of these young people have made great sacrifices and denied themselves pleasures, even comforts, to thus equip themselves, and many parents have made even greater sacrifices to assist and enable their children to obtain advantages which they themselves never enjoyed.

The unfortunate, the tragic, fact is that these young men and women face extremely difficult conditions in securing places in the professions or occupations for which they have equipped themselves. They enter upon the active scene at a time when the whole world is seething with unrest and social and economic upheaval which is the aftermath of a great war fought in the years of their childhood. There is nothing unusual in such an upheaval because a similar condition has followed after every great war in the world's history, the only difference being that in this more highly civilized and machine age standards of education and living are much higher than in bygone centuries, life is more complex, and we all expect and demand more than did our forefathers.

The world of mankind could not commit the enormous and terrible crime of the Great War and expect to escape the almost equally terrible consequences of the crime committed by them. The youth of to-day can truthfully say they are not responsible for that crime, and youth may ask why they should be punished because of it. But, no matter how great the changes that have taken place down through the centuries, neither the moral law nor the laws of Nature have been altered. They remain fast and unalterable, and it is still true as it has been from the beginning of time that the sins of the fathers are visited upon the children of succeeding generations.

Youth must face this solemn truth and, along with it, face conditions as they are and the responsibilities which are forced upon them. They must go out into the world as it is, and in doing so must decide for themselves what their attitude in and toward life is to be. They cannot, even if they would, evade their responsibilities and must discharge them either for good or ill as they themselves determine.

Is the young graduate in law looking on life and his profession merely as a means of livelihood, wealth and position, or is he inspired with a sincere desire to see justice done in all cases, wrongs righted, oppression removed, regardless of the fact whether it means wealth and position for himself or not?

Is the graduate nurse only desirous of obtaining steady employment for herself, or has she a real vision of service in the profession ennobled by Florence Nightingale who gave her whole life to it without thought of personal reward?

Is the new medical doctor thinking only of a big and lucrative practice in some centre of population, or is he resolved to devote his life to the alleviation of suffering wherever it may exist, and the prevention of disease that suffering may likewise be prevented, quite apart from material gain to himself?

In a word, are our new lawyers, doctors, nurses, teachers, engineers, clergymen, and others entering upon the activities of this sorely troubled world with purely material gain to themselves as their goal, animated by no finer ambition than some of that same selfishness which is to-day the curse of the world and has brought it to the state wherein youth now finds itself so severely handicapped, or are they prepared and ready, yea, determined, to do their part in the creation of a finer world, inspired by loftier motives of service, which they can pass on to their children?

Is the coming generation going to place stress on money, economic security for themselves, the attainment of social position and power, as so many of the past generation did and which ultimately ended in a world war, or are they going to strive to excel in the rendering of service to their fellow men? Is it life itself, in its truest and highest meaning, they are going to live, or is it to be merely a striving for selfish possession of the material things of life?

The great names which history records with credit, and which remain household words to inspire, are not those of men and women who amassed wealth or achieved social position. No, they are the names of the disciples who, ignoring and abandoning all, followed the Master; names, too, like David Livingstone and Florence Nightingale; names of doctors, chemists, scientists and inventors who freely gave their discoveries to the world for the world's benefit and advancement; clergymen and missionaries who lived not for themselves but for others.

Youth to-day enjoys just as great opportunities for real service as at any previous time. It depends upon youth itself which road it will travel,—the road of helpful unselfish service to uplift, elevate standards of thought and living, or the road of personal selfishness, thinking only of self, and thus tending to a further degradation of mankind and intensifying the troubles, sorrows and injustices of the world.

Soybean Seed Varies

Amount Required Per Acre Depends Largely On Variety

Soybeans may be drilled solid, like small grains, or seeded in cultivated rows, usually 28 inches apart. The grain drill can be used for both methods.

The amount of seed required to plant an acre depends to some extent upon the variety, as soybean seed varies somewhat in size, according to the variety. In general, however, row seeding will require from 30 to 45 pounds of seed per acre, while drilled seeding will require 90 to 120 pounds of seed per acre. The drill should be regulated to drop the seed about 1 to 2 inches apart in row planting, and 2 to 3 inches apart where drilled solid.

The time of seeding will vary somewhat according to locality and conditions. At the Central Experimental Farm, Ottawa, seeding about the middle of May has been found very satisfactory.

Building Special Machine

Britain Will Attempt To Regain Airplane Altitude Record

The attempt of the Royal Air Force to regain the airplane altitude record for Great Britain is to be made by specially selected officers in August. The present world record is that of 47,572 feet, reached by the Italian airman, Donati. For this stratosphere flight the Air Ministry recently placed an order for a special machine, and it is now under construction. The chosen crew will undergo training similar to that of Schneider Trophy pilots. One test which will be applied at the R.A.F. establishment at Farnborough, England, will be that of the "Decompression Chamber," in which a man is placed and his reactions noted to atmosphere conditions similar to those of the stratosphere.

HIS LUMBAGO HAS NOT COME BACK

Keeps Free Of It With Kruschen

There can be no doubt about the effectiveness of the remedy this man uses against lumbago. Read his letter:—

"About four years ago, I had a bad attack of lumbago. After being in hospital for two weeks taking heat treatment, I started taking Kruschen Salts. Since then, I am happy to say, I have not been troubled with lumbago. I shall still continue taking Kruschen to be sure the lumbago won't come back."—A. C. C.

Why is it that Kruschen is so effective in keeping lumbago at bay? Simply because it goes right down to the root of the trouble, and removes the cause, which is an impure bloodstream. The six salts in Kruschen keep the bloodstream pure and vigorous by promoting a clockwork regularity of all the organs of elimination.

Cyclone On The Sun

Represented By Group Of Enormous Spots Just Discovered

German astronomers and meteorologists report the discovery of a group of enormous spots on the sun ten times the size of the earth.

The Potsdam Observatory reported having found on the lower left edge of the sun a fantastically patterned group of spots, the length of which German scientists estimated at between 60,000 and 70,000 kilometers, between 37,500 and 43,750 miles.

The German astronomers say that these sun spots represent a cyclone of powerful dimensions which has suddenly appeared on the sun and now is moving in the upper gas stratum, sending great waves of electrical tension into space.

Foresees End Of Scourge

One Of Famous Mayo Brothers Says Cancer Being Conquered

Dr. W. J. Mayo, one of the two famous Mayo brothers of Rochester, Minn., predicted at San Diego, Cal., that "the day is not far distant when there will be no fear of cancer."

"Less than 10 per cent of American people are susceptible to cancer, and of these only a very smal percentage ever contract it. It is with these that we are working," he said.

"Medical science has made rapid strides toward control of cancer and sooner than many suspect will have it whipped just as medical science whipped typhoid fever."

Parrots Not Bold

Parrots, generally considered one of the boldest birds, are in reality very shy, according to Dan Harkins, curator of Franklin Park zoo, in Boston. Harkins said the parrots whistle and talk much better before small audiences.

"My papa's a mounted policeman," said little Pat to his mother's visitor.

"Is that better than being a foot policeman?" she asked.

"'Course it is," replied Pat. "If there's any trouble, he can get away quicker."

It is reported that copious artificial rain fell over the Zuyder Zee a year ago, when two tons of dry ice were discharged by aeroplanes over clouds. 2099

1000 PAIRS OF MONARCH DEBUTANTE SILK STOCKINGS free!

Go to your druggist or department store and buy RIT Dye (any color, 15c—2 for 25c). Use it. Then tell us in a statement of 50 words or less, why you prefer RIT—1,000 pairs of Monarch Debutante full-fashioned—shadow-free pure silk chiffon stockings—latest Spring shades—guaranteed $1.00 value—will be given as prizes to 1,000 entrants. There are dozens of reasons why you will prefer RIT. RIT comes in 33 basic brilliant colors, from which can be produced over 50 of the newest Paris shades.

FAST COLORS WITHOUT BOILING!

Only RIT offers this advantage! RIT is the modern tint or dye—easier and surer—far superior to ordinary "surface dyes" because it contains a patented ingredient that makes the color *soak in deeper*, set faster and last longer. Sold everywhere.

HOW TO WIN

1. Write a short statement (under 50 words) on why you prefer RIT Dyes and send it together with an empty RIT package (or reasonable facsimile) and your name and address, to John A. Huston Co. Ltd., 42 Caledonia Rd., Toronto.
2. Send as many as you wish; contest closes midnight June 29, 1935.
3. 1,000 prizes will be awarded on the decision of the judges, which will be final. Whether you win a pair of silk stockings or not, we will mail to all entrants free of charge, our famous booklet—"The A.B.C. of Home Rug Making".

RIT is a convenient powdered form; needs only water, no boiling necessary; won't sift out of the package.

The New Rocket Ship

Machine Of Future May Travel 4,400 Miles Per Hour

Aeronautical experts of the California Institute of Technology estimate that with the solution of mechanical difficulties rocket ships can be built capable of flying 4,400 miles per hour.

The aeroplanes would resemble dragonflies, with thin stubby wings and long spindling bodies. Their noses would end in air-piercing points.

Such a machine was designed by William Bollay, graduate research student. He calculated that a rocket ship must carry 85 per cent. of its weight in fuel, liquid oxygen and gasoline. This mixture would be exploded in a propelling exhaust from a jet at the tail.

The aeroplane would take off at 95 miles per hour, climb to the stratosphere at 90,000 feet in five minutes, and have a ceiling of perhaps 120,000 feet. The climbing rate would be 10 times that of fastest military aeroplanes.

Mechanical difficulties are far beyond the ken of present aircraft facilities, he said. There would first be the task of constructing a stiff tubular fuselage and wings that would hold up at such tremendous speeds.

Ordinary ships would melt from the heat of the air friction, he said.

The pilot must be protected somehow, or he will be scorched at one end and frozen at the other. Liquid oxygen for the fuel is of sub-freezing temperature, while the rocket jet explosions would reach several thousand degrees centigrade, Bollay explained.

Scientists here agreed that the first use of the rocket ships will be in pilotless flights to the stratosphere carying self-recording instruments. Some experiments already have been made along this line.

Another Scientific Find

Biochemist Says Animals Frozen Solid Can Be Revived

Dr. Ralph Willard, California's youthful biochemist who has reported freezing guinea pigs solid and then restoring them to life declared he does not "dare to hope" what possible effect complete freezing would have on human beings.

"My experiments," he said, "if successful may be of value in glandular therapy, the correction of criminals, or the treatment of excessively fat people.

"Freezing evidently destroys abnormal growth of tissue produced by degeneration, and when the guinea pigs are revived the normal condition is restored," he said.

Bank Of Canada Dividend

A directors' meeting of the Bank of Canada declared a dividend of 4½ per cent. on the common stock. The dividend will be paid on July 2 to shareholders of record May 31. The payment will be made on the basis of 4½ per cent. of 12.50 a share from Sept. 21, 1934, to Jan. 2, 1935, and on $50 a share from Jan. 2 to June 30.

Marking Whales

About 700 whales have been marked with long steel bullets fired by the members of the Antarctic scientific expedition aboard the ship William Scoresby. The object of this was to find where whales go in various seasons. A reward of one pound is offered for each bullet recovered.

The poisonous part of poison ivy is the milky sap, and the sap retains its poisonous properties even when dry a long time as on dead twigs.

Select Own Best Books

Authors Choose Gifts For King's Library At Windsor

Sir James Barrie, who has celebrated his 75th birthday, suggested to his fellow authors that they make a present to the King of one of their own works for the library of Windsor Castle.

The selection thus far affords another proof of author's estimate of his own work is often at variance with popular opinion. Barrie himself, with Scottish shrewdness, offers his "Collected Plays" and Bernard Shaw is sending "St. Joan."

J. B. Priestly, however, rejects his "The Good Companions" for his later "English Journey."

The poet laureate, John Masefield, sent his "Gallipoli" and Stanley Baldwin "On England."

Amphibian Tanks Tested

French Machines Successfully Cross Streams And Climb Banks

Amphibian tanks able to ford rivers as they advance, successfully passed tests of a special commission of the Army Engineer Corps at Maubeuge, France.

The seams of the tanks are caiked with a plastic substance invented by a French engineer, making them watertight. The war engines rolled across fields and down river banks into the water, successfully crossing streams four feet deep and climbing up the opposite bank. They also travelled up and down stream for a distance of about 100 yards.

Little Journeys In Science

WOOD ALCOHOL

(By Gordon H. Guest, M.A.)

Wood alcohol, or methyl alcohol, is made by the distillation of hardwood during the production of charcoal. It is one of the vapours that comes over in the distillation. Acids, such as acetic (vinegar) also come over; these are neutralized and the remaining crude methyl alcohol distilled off. Another method of producing wood alcohol has recently been discovered. This new process consists of heating a mixture of two volumes of hydrogen with one volume of carbon monoxide over a substance known to chemists as a catalyst. Now a catalyst is something which speeds up a chemical reaction but it itself entirely unchanged. The catalyst used in this new method of making wood alcohol consists chiefly of zinc oxide.

Pure methyl alcohol has an odour and taste resembling ordinary alcohol. It is poisonous and many cases of blindness and death have occured from drinking beverages containing wood alcohol. It should not even be used for alcohol rubs. This fault is changed into a virtue when methyl alcohol is used to denature ethyl alcohol (ordinary alcohol).

Wood alcohol has been used for many years in the dye industry and as a solvent in making polishes, lacquers, and varnishes. It is the raw material from which formalin, the well-known disinfectant, is made. Methyl alcohol burns with a flame of high heat value and hence is used in alcohol stoves.

In the production of methyl alcohol from wood three interesting by-products are produced. One is a mixture of methyl alcohol, acetone, and methyl acetate. This mixture is known in commerce as methyl acetone, and is used in large quantities as a paint remover. Another consists of a mixture of liquids known as ketones by the chemist and this material is used as a solvent in the lacquers for airplane wings. Still another is a compound called allyl alcohol, a peculiarly irritating liquid which is made into a compound forming the basis of an ointment which is used for colds and sore throats. This compound made from allyl alcohol is a synthetic mustard oil.

Chinese Pray For Rain

Peasants In Shantung Province Appeal To "Dragon God"

Thousands of Chinese peasants gathered at Chefoo, Shantung province, to ask the "dragon god" for rain to water fields, bone-dry since December.

As dust storms similar to those that have ravaged sections of the Canadian prairies in recent years swept away the last hope for parched crops, the peasants flocked to their principal temple at Chefoo, northern Shantung's pantheon, to appeal to the dragon god.

They carried him through the fields of this "sacred province" so he might view the wilting crops. They thrashed themselves with branches to show him how they suffered.

Game Conservation

Demand For One Year's Moratorium On Waterfowl Shooting

Counselled by international conservation leaders, a massed petition demanding a one year's moratorium on waterfowl shooting is crystallizing in 11 midwest states and three Canadian provinces.

The movement, known as the Midwest Conservation Alliance, was organized for international midwest action on "the greatest wild life emergency America has faced since the passing of the buffalo."

Such international leaders as W. G. Ross, Moose Jaw, president of the Saskatchewan Fish and Game League, Kermit Roosevelt, New York, president of the National Association of Audubon Societies, and Jack Miner, Kingsville, Ont., are numbered on the Alliances' active counsellors.

With preliminary activities indicating a unanimity of opinion for its objective, the Alliance is circulating petitions prepared on two forms—for sportsmen's clubs, and individual sportsmen. After signing, these forms are returned to the St. Paul office for correlation. When complete, the massed petition containing names of thousands of midwest sportsmen on the international front will be personally presented to President Roosevelt to secure an executive order for a closed season.

"In extending an invitation to Canada to join in the movement," the first M.C.A. bulletin read, "this organization does so with the realization that it is the duty of the United States to first put its 'house in order'."

"Our responses from Canada have demonsrated beyond doubt the sporting blood of our neighbors, and have accentuated the need for United States' action on this problem. On the basis of the past abuses on duck hunting as practiced in the States, Canada would have been justified in ignoring our appeal. We deem it our mandate to make restitution to waterfowl for our offences through staving off extirpation through a closed season for one year."

Inviting Canadian organizations to join the movement by signing petitions, the Alliance announced that all units desiring petitions may receive them by addressing to the St. Paul office.

The organization represents the "greatest concentration of conservation leadership and prestige ever assembled under a single campaign crusade," the bulletin concluded.

New Publications

McKim's 1935 Directory Of Canadian Publications Gives Evidence Of Improved Conditions

The 1935 McKim's Directory of Canadian Publications, just off the press, lists tangible evidence of improved business conditions, showing an increase of 62 new publications as against an increase of only 20 the previous year. Failures in the publication field decreased proportionately.

This 1935 edition of the directory is the twenty-eighth, the series having begun several years after the founding of the A. McKim Limited, advertising agency in 1889.

Recognized as an authentic gazetteer of advertising media throughout Canada, the directory gives exhaustive information about newspapers, magazines, trade papers and miscellaneous publications. Provinces, cities and towns where publications operate are all listed, together with populations, industries and outstanding characteristics of market areas.

Somewhat larger than its predecessors, this edition will replace last year's directory on the desks of manufacturers, publishers and all firms dealing in advertising in Canada. Enquiries concerning the publication should be addressed to any one of the six McKim Advertising Agency offices at Montreal, Toronto, Winnipeg, Vancouver, Halifax or London, England.

Silk thread, because it has greater tenacity than steel wire of the same diameter, is used by a German in making cannon. The cannon is made of steel tubes, wrapped with silk thread until the required size is attained.

Waiter—Would you mind settling your bill, sir? We're closing now.

Irate Patron—But, hang it all, I haven't been served yet.

Waiter—Well, in that case, there'll only be the cover charge.

A tire with especially heavy tread is one manufacturer's solution of the winter problem of driving on snowy and icy surfaces.

The Roll of Honour

Call the roll of critical "roll your owners" and you'll find that Ogden's Fine Cut is their favourite cigarette tobacco.

Ogden's rolls cigarettes that are cooler — milder — more fragrant, because every leaf used is selected for quality, and mellowed by nature.

Ogden's Fine Cut and "Vogue" or "Chantecler" papers are the combination receiving the highest honour from men who "roll their own".

Made Income Producer

California City Using Sewer Gas To Operate Civic Plants

Sewage gas is being turned by the city of Palo Alto, California, into an income producer expected to return revenue and a saving of several hundred dollars a month. Heretofore, it has been burned as wholy waste matter.

The gas already is being used to heat and to operate a converted gasoline engine which in turn generates electric power for one of the plant's pumps.

Prepaartions also are being made to use the gas for flood-lighting the municipal aviation field nearby.

A Clever Sculptor

Work Of Blind War Veteran Admired In Italy

Ernesto Masuelli, who completely lost his sight in the World War, has become a sculptor in Rome. The ex-soldier had done no modeling until four years ago. His receptional memory enables him to recall shapes and details, and he prefers to work in the dark when the household has gone to bed at night. In spite of his heavy handicap, Masuelli has overcome the technical difficulties of his art without instruction. His work has been much admired in Italian art circles.

Several fragments of sixth century B.C. pottery discovered at ruins of Lachish, Palestine, bear the name of Jahve, spelled as Jehovah in the Bible.

A sailing vessel built in Denmark in 1799 is still on its trade routes and is believed to be the oldest one in the world on active service.

Stealing was rare in Mexico before the coming of white men, a pair of crossed sticks before an open door being thought sufficient precaution.

Warehouses At Calgary, Edmonton, Regina and Winnipeg

Recent Tests Under Practical Conditions Show That Television Is Now Beyond Inventive Stage

For years we have been told that television was "just around the corner." When, therefore, David Sarnoff assured the stockholders of the Radio Corporation of America that the fruits of research were about to be exhibited to a chosen few—and this means next year—he must have been aware of the skepticism with which his predictions would be received by the thousands who have been waiting to push a button and twist a dial to behold the President as he addressed them or watch the winner of the Derby leading the field.

The fact that Mr. Sarnoff commits his company to tests under practical conditions is in itself evidence that television has been carried beyond the early inventive stage. He pins his faith on the iconoscope of Dr. Vladimir K. Zworykin—an apparatus which sprays electrons like paint to form an image on a highly exhausted tube, and which, there is every reason to believe, deserves the praise that has been lavished upon it. If television has been so long in coming, it is partly because the entirely new science of electron optics had to be developed. Now that the foundations have been laid, the engineer can design televisors which may be entrusted to a few score critics who will report how they like what they see and indicate what they want. The sum of $1,000,000 which Mr. Sarnoff allots even for this prudent grouping in the dark is small. In the end much more will be spent before sets appear which will withstand the efforts of dial-twisters to wreck them. Edison devised elaborate machines to kick, jounce and otherwise abuse his storage battery, knowing, as he once said, that "it will be put out of busines in five minutes by any truck driver." Years passed before he discovered how the ingenuity of ignorance could be thwarted.

There never was a technical problem so difficult as that presented by television. In the light of present knowledge the country must be dotted with high transmitting stations if there is to be national broadcasting, and this for the reason that the image-carrying waves, like those of light, are easily blocked by tall buildings and mountains. Thirty miles is the range of a transmitter. Hundreds of millions must therefore be invested in a myriad stations. And there still remains the task of providing a public that flocks once a week to the motion-picture theatre with a new play every night. It is easy to understand why only a million should be cautiously set aside to take the first step.

What is especially encouraging in Mr. Sarnoff's announcement is the implication that the laboratories have been at work in these lean years. The timidity of capitalists is proverbial. Yet here we have an example of their optimism, their courage, their readiness to create a new art and a new industry, and to realize a romantic ideal. Television is not likely to extricate us from the financial mire. Yet it may well receive its strongest impetus in the darkest of economic cycles, and this because there is an unquenchable faith in the part that the scientist and the inventor can play in the onward sweep of society.—New York Times.

Claim Magical Powers

Tibetans Assert They Can Create Heat By Suggestion

The mysterious powers of the Tibetan were described at Berlin, Germany, by Dr. Dyhenfurth, leader of an expedition which has just returned from the Himalayas.

Telepathy, he said, is employed in Tibet just like the telephone in Europe. A messenger was sent on a 12 days' journey to the headquarters at Darjeeling to report the death of a bearer. When he arrived there he found that the local natives had already informed the officials of the man's death on the same evening on which it occurred.

He told how the Tibetans are able to create warmth through the power of suggestion. They cannot only spend the night in the snow, clad only in a shirt, but by the heat given out from their bodies can dry wet clothes placed on them.

One who can dry six such cloths is a "pupil"; he becomes a "master" when he can dry 20.

Canadian Physical Association

Dr. A. S. Lamb, director of physical education at McGill University, was re-elected president of the Canadian Physical Association at the concluding session of the association's annual meeting in Montreal. Vice-presidents elected for the coming year included: W. G. Brandeth, Vancouver; Miss E. M. Cartwright, Saskatoon, Sask.; Robert Jarman, Winnipeg.

An unbreakable aluminum pole for vaulters has been perfected. It is expected to replace the old bamboo pole.

More than 163,280 British subjects visited Germany last year

Few Aircraft Accidents

Figures Indicate That Aviation In Canada Offers Comparative Safety

Evidence that aviation in Canada is becoming increasingly safe was shown in figures compiled by the civil aviation branch of the department of national defence on aircraft accidents during the last three years.

The figures showed that in 1934 Canadian aircraft flew 6,497,637 miles and that in 75,871 aircraft hours required to fly those miles, 12 persons were killed and nine injured. Among the dead were three passengers, four pilots, three other crew members and two bystanders. Seven pilots and two passengers were hurt.

In 1933 the total number of deaths was 25, including 12 passengers and eight pilots. Thirteen persons were hurt, including five passengers. The aircraft miles flown were 4,538,315, almost 2,000,000 less than in 1934. In 1932 a total of 12 persons were killed and 13 injured, while the mileage flown was a little more than 1933.

The 1934 record of fatalities showed one person killed per 928,324 miles flown, compared with one in 453,831 miles in 1933 and one in 571,-141 in 1932. One passenger was killed per 2,165,879 miles flown last year, one in 378,193 miles in 1933 and one in 1,523,044 miles the year before.

Safety On The Highways

Motorists Who Decide To Be Careful Will Help Greatly

After all is said and done the matter of safety on the highways is up to the motorists. They can decide for themselves whether this summer is to be a time of happiness or pleasure on the road, or a season of growing terror, accident or death. If all intelligent, responsible motorists decide to be careful, to drive carefully and reasonably, and observe the courtesies of the road; if they will be patient and obey scrupulously all laws and regulations, reasonable or unreasonable, because they are laws, not because of fear of penalties, the problem of safety will be solved. Reckless, careless, indifferent and incapable driving causes most casualties. The trouble is not with the cars, they will stand up under what is demanded of them. The trouble is with the human equation which can be taxed only so far. Speed will have to be kept more within reason, and human capacity if deadly accidents, and in particular crashes between car and car and tragic roadside pileups are to be reduced. The speed problem may never really be solved anywhere except as result of the working of an aggressive, militant public sentiment. But safety is up to the driver.—St. Catharines Standard.

Best Lighted Street

London Road Owes Distinction To Long Ago Fatality

Prince Consort road, London, S.W., a short, wide road running behind the Royal Albert Hall, is the most "built-up area" in London—judged by the "lamp standard."

It is one of the quietest, too, after dark. It has no houses. It is lined by a students' hostel and a few large buildings. It has twice as many lamps as any other street of the same size in London. This is the reason:

A young man, whose family lived in Queen's Gate, was killed by a horse-carriage in Prince Consort road nearly fifty years ago. The coroner told the mother that the accident had been partly due to the bad lighting in the road.

When she died the mother left money to the local parish so that the road should be endowed with lamps every few yards on each side.

Arduous Journey

Returns After Jaunt Of 400 Miles Across Northern Canada

Seven weeks of the most arduous trekking at an end, David Irwin, of Grand Rapids, Mich., was back in civilization, recuperating from the rigors of his jaunt across northern Canada from Baker Lake, N.W.T.

Irwin arrived at Churchill with but three dogs to draw his sled after a journey of more than 400 miles. Irwin was associated with Andrew Bahr in the reindeer drive from Alaska, but left the expedition two years ago.

Connaught Cup Winner

Michael MacBrien, son of Major General J. H. MacBrien, commissioner of the Royal Canadian Mounted Police, was awarded for the second time the cup donated by the Duke of Connaught, former governor-general of Canada, for physical training at the annual Ashbury College gymnastic exhibition at Ottawa.

Socialist: "After all, what is the difference between the rich man and the poor man?"

Bystander: "The rich man has acute laryngitis and the poor man has a cold."

2099

Personality Was Changed

Woman Whose Brain Lobes Were Removed Is Different Person

A woman whose mind was improved by an operation that removed nearly the entire "thinking" portion of her brain was described to the American Psychiatric Association at Washington.

The report reads like a fairy tale of medicine—for her personality changed—was lifted to better levels.

The operation removed the entire right prefrontal lobe and most of the left lobe. These lobes are the grey matter credited with being the seat of reason, logic and intelligence.

That they also strongly affect personality was not so widely believed.

The report was made by Spafford Ackerly, M.D., associate professor of psychiatry, of the University of Louisville School of Medicine. The operation was done two years ago, he said, by Glen Spurling, professor of neuro-surgery at the same school.

For the first year afterward she was extraordinarily gay and happy, almost childishly so. With the second year came the mature changes now reported. Intelligence tests rate her as well as the average adult.

But her power of concentration has improved over anything previously shown by her. Her memory of immediate events is good, and for events long past is "remarkable." She reads English much better than before the operation.

She says she can do more work without fatigue.

Her increased concentration, the report states, causes her to insist in talking to a finish what she starts to say despite efforts to change the subject. She never hesitates after executing a decision.

Another trait that seems associated with the increased concentration is a marked tendency to walk directly to any destination without looking to right or to left.

Her religious advisers are delighted with her piety, her church attendance and evident love of religion. But her husband says she has feelings of superiority.

Had Mechanical Mind

Telephone Set Interested King George When He Was Young

When King George was about eight years old and living with his parents at Marlborough House there arrived a telephone set that had been made on board a warship. It was sent to Marlborough House as a gift to the then Prince of Wales (Albert Victor, who died in 1892) from the officers and crew. This telephone set was put to one side until it was discovered by Prince George, who became keenly interested in what was then regarded as a curious mechanism. Prince George was anxious to see and understand how the thing worked, and eventually a servant named Church, who was something of a mechanic, made practical use of the telephone set by bringing the boudoir of the Princess of Wales into telephonic communication with the schoolroom. This is believed to have been the first telephone in any London house.

Protect Civil Population

Compulsory Air Raid Drill May Be Inaugurated In Britain

Drafting plans which may call for doubling the home strength of the British Royal Air Force at a cost of $120,000,000 over and above the increased air estimates already brought down, the air ministry advised British aircraft manufacturers not to accept foreign orders without consulting the ministry.

While the ministry was warning manufacturers of the likelihood of a considerable demand on their facilities by the government it was forecast that compulsory air raid drill may soon be a feature of the life of the country. It is understood a country-wide scheme is in preparation for making the population of the United Kingdom "air-raid-minded" as part of the comprehensive plans for protection of the civil population.

Armored Cars

Ministry Of National Defence Experimenting With New Type

The ministry of national defence is having experiments made by Canadian motor manufacturers in small armored cars—ordinary, four wheeled automobiles with special plating, it is stated. The experiments are in the initial stage and are purely experiments. Reports that tanks were being made was strongly denied.

"Canada hasn't a tank in the country," a senior defence official stated, "nor has she the slightest intention of starting on tanks. These cars can by no stretch of imagination be called tanks. We are just trying out a few experiments with ordinary cars, for troops."

Becoming More Modern

Medicine, nursing, dentistry, pharmacy are the principal sciences which are attracting Japanese women. Leading women in Tokyo have a society to study the municipal administration and general city affairs, and women are taking their place in the modern life of the nation as a tremendous force economically, socially and personally.

PRINCE OF WALES PRESENTS SOCCER CUP

Here we see the Prince of Wales presenting the coveted Association Football cup to the captain of Sheffield Wednesday after the soccer final between the Wednesday and West Bromich Albion. 93,000 people saw the game in the Empire Stadium at Wembley.

Survey Tells The Tale

Shows Western Ontario Has More Horses Than Cars

"Now that the automobile has taken the place of the horse"—famous words of an after-dinner speaker.

But look at this excerpt from one of the surveys recently made by W. H. Wood, manager of the London (Ont.) Chamber of Commerce.

"The passing of the stage coach and the coming of the automotive vehicle has not by any means meant the passing out of the horse, for there are to-day in Western Ontario over 82,500 more horses than automotive vehicles."

There are 243,000 horses valued at more than $21,478,700.

There are 160,450 automotive vehicles which averaged at a value of $1,000 each represent $160,450,000.

"The value of the automotive vehicles over the horses is in favor of the first mentioned by more than $138,970,000."

Prairie Tree Planting

Several of the provinces of the Dominion have made provision for the distribution to farmers of young trees for planting, at little or no cost to the recipient. The eldest established scheme of this nature is that originally established by the Forest Service, Department of the Interior, in the Prairie Provinces, and now operated by the Federal Department of Agriculture. This has its headquarters at Indian Head, Saskatchewan. The provinces of Ontario and Quebec have similar schemes.

India Saves Millions

Machine Has Been Invented To Kill Off Insects

A machine designed to rid India of its traditional pestilence of mosquitoes and other insects aroused widespread comment at Hyderabad, India, following a successful demonstration by its inventors, the French engineers Menasche and Demoutier.

Experts witnessing the demonstration declared the machine, which consists of an ultra-ray burner and a suction fan, is probably the best means of destroying insects that has ever been demonstrated.

The machine is said to be particularly effective against agricultural insects, which do millions of dollars worth of damage to crops in India every year.

After Many Years

Clad in union blue, Patrick O'Leary marched away from Providence, Rhode Island, back in 1861, distinguished himself in action during the civil war, and sent $120 to the Providence Institution of Savings. But he never returned. Seventy-four years later, his daughter, Miss Ellen O'Leary, winning court litigation to prove her claim, withdrew the money from the state treasury, which received it from the bank in 1909. With interest, the money totalled $1,100.

Your breakfast coffee may soon be brought to the table in the form of chips about six-hundredths of an inch long and only three-thousands of an inch thick.

The SNAPSHOT GUILD

Get In the Picture Yourself

You too can get in the picture if you use the self timer.

"I enjoyed the Snapshot Guild article last week very much, for taking snapshots of my children is almost a hobby with me," wrote a reader. "I was hoping, however, that you would tell mothers how to include themselves in the picture with their children," she continued.

Perhaps others are interested in this subject. The self timer is a most fascinating little gadget and almost human in its operation. It is an inexpensive accessory that fits over the metal button or plunger, at the end of the cable release, which you press to take a snapshot with a folding camera. It cannot, however, be used unless the camera is fitted with a cable release.

Here is how it works. First you locate your subject in the finder and at the same time plan the space you will occupy when you step into the picture. Suppose you want to take a picture of Jane sitting in your lap as you read to her. You will have to have the camera on a tripod, table or something solid. Locate the chair in the finder—and be sure you can see all of the chair, especially the upper part of the back where your head will appear—for if you are not careful you will find you have decapitated yourself when the finished prints are returned.

If the picture is to be taken indoors you will have to apply all the rules of indoor snapshooting. The diaphragm should be set at f.6.3, the shutter speed at either 1|10 or 1|25 of a second and you will need one or two photoflood lamps placed in an ordinary floor lamp (with the shade removed) to give more illumination to the side away from the outside light.

When the diaphragm is set at the proper opening with the correct shutter speed, the same as if you were going to snap the picture yourself, set the self timer for ten seconds or a minute, depending on how long it will take you to get into the chair with Jane comfortably seated in your lap, ready to listen to your story. Turn on the photoflood lamp, slip the timer over the button at the end of the cable release, press the little release lever on the self timer and it starts buzzing away, and then —click—it has taken your picture.

In spite of the simplicity of the procedure Jane is going to get a thrill out of it and when the picture is snapped she'll probably be portraying a million dollar smile—and this will add much to the value of the picture.

You can purchase the self timer attachment from almost any store that sells cameras. They are not expensive and last a lifetime.

Some cameras have self-timers incorporated in the shutter so if you have this type of camera and have never used the self-timer you have missed a lot of fun and picture possibilities.

Saskatchewan Mine Is Worked Under Direction of First Woman Coal Mine Operator In Canada

Skill Is Required

Managing A Parachute Not As Simple As It Looks

Pilots and officials of airlines in New York explained why passenger airplanes do not carry parachutes for passengers, which, many persons thought, after news of a recent crash in Missouri, might have insured safety for the victims.

No passenger airline in the world, they said, requires parachutes on a plane, because they believe that parachutes would cost more lives than they would save. To open a parachute is a knack and requires a certain familiarity with their mechanism, he said; a parachute is not adjusted so easily as a life preserver on a ship, and passengers are uninstructed in this technique.

Furthermore, it was said, dropping in a parachute and landing safely is not easy. One must count five slowly before pulling the ring which releases the parachute folds. If one pulls the ring too soon, the chute fouls in the tail of the collapsing ship and disaster follows. It takes considerable resolution and much practice when one is falling earthward rapidly to wait until the proper second to pull the ring.

The parachute jumper must steer his parachute to clear obstacles below. If he lands in a tree or hits a house, it is almost certain death. A strong wind, which frequently accompanies airplane crashes, will drag the parachute along the ground and only skill in landing will avoid this mishap. In crashes of passenger planes, the consensus was, passengers are safer inside the plane. Most crashes occur on the take-off or at a low altitude and altitude is necessary to manipulate a parachute.

Fund Passes Objective

Over $500,000 Has Been Promised For Boy Scouts

More than the $500,000 requested from Canada as part of the governor-general's plan to strengthen the Boy Scout movement has been reached, the executive committee of the Canadian general council reported at its meeting in Toronto. Final returns will not be available until the 1935 report is completed.

The effort to increase the number of Boy Scouts in Canada to 100,000, part of the governor-general's plan, resulted in a total membership of 65,828. Eight of the provinces had an average increase of 4.2 per cent. Crop failures had an effect in Saskatchewan, where there was a decrease of 18 per cent.

The stores department reported a profit for the year of more than $9,000, with a turnover of $98,889. The 11th annual national "Christmas good turn" was carried out by a trans-Canada chain of toy repair shops in 159 cities and towns.

There are 24,244 wolf cubs organized into 1,066 packs. Boy Scouts number 33,715, organized into 1,469 troops. Rover or senior scouts total 2,461. Sea scouts and rover sea scouts have 486 members. There are active groups of handicapped boys in 14 institutions.

More than 12,000 boys attended 629 Boy Scout camps across Canada last season. A total of 469 groups are affiliated with the Church of England, 204 with the United Church of Canada and 101 with the Roman Catholic church.

Among national awards presented to scouts, cubs and rovers were medals presented for saving lives of 23 persons.

Holstein Judging School

Saskatchewan Branch Of Association Will Hold Two This Summer

Under the new policy by which provincial branches determine the spending of breed promotion money, the Saskatchewan branch of the Holstein-Freisien Association of Canada are laying plans to hold two judging schools in the province this summer. They will be held at Saskatoon and Regina at the time of the summer fairs. Efforts are being made to bring P. H. Moore, manager, Colony Farm, Esondale, B.C., to Saskatchewan at this time to conduct the schools. The object is to train local breeders in judging so that competent judges will be available for the local "B" and "C" class fairs.

The association has also offered managers of dairy calf clubs a sum of $15 to provide prizes for Holstein calves shown at local club shows, providing the management put up an equal amount at these shows.

Timothy Seed Market

The large production of timothy seed in the Pincher Creek area of Alberta and the Bulkley Valley of British Columbia has practically all been marketed during the season. It would appear that there is an insufficient supply of alfalfa and crested wheat grass for Albertan demand, and alsike is said to be in short supply in British Columbia.

In the national aristocracy of business, Miss Jessie Hamilton, demure student of mining detail, occupies a niche among the first flight. To prove woman's claim to a choice of professions, she stepped from a Manitoba country school into the heart of Saskatchewan's coal fields and emerged Canada's first woman coal mine operator.

The hum of hoist engines, each capable of lifting 500 tons of coal each day, penetrates the trim office she occupies on her vast holdings a few miles west of Bienfait. But Miss Hamilton, who stepped into the breach to carry on the work and plans laid by her father, explains it was all a matter of necessity.

The training she received before the death of her father, R. L. Hamilton, one of the early pioneers in this coal mining district, stood her in good stead for the career she was to adopt. She is a graduate in arts of the University of Manitoba. For a time she taught school at Mile 214, south of Churchill in northern Manitoba.

Keenly efficient, Miss Hamilton came to her rank as mining mistress not alone by right of heredity but by a succession of achievements that rank her as a leader in a man's vocation. Since the opening of the mine site, in 1926, there has been a continuous record of such achievements in which the new owner has played no small part.

Shortly after opening the new mine, thousands of gallons of water poured in on miners in the workings. Electric pumps were installed capable of pumping out 17,000 gallons each hour. New cutting and shearing machines were employed and other improvements carried out to make the mine one of the leading shaft operations in the field.

Miss Hamilton is modest about it all. She does not like the suggestion she is possibly Canada's first woman mine operator. She has sufficient confidence in the men working for her to accept the responsibility and undertake to master detail associated with a sizeable mine.

Always Plenty To Do

Woman Guide-Lecturer In British Museum Likes Her Work

Miss Marion Thring who, in competition with more than 200 men, was the first person appointed to the Victoria and Albert Museum in London as full-time guide-lecturer, has finished her third month of work.

She has covered nearly 1,000 miles of the museum galleries, and learned all the facts about 10,000 or more of its uncounted treasures.

But she must walk another 1,000 miles and study another 10,000 objects of art before she is equipped for her job. The first of her regular schedule of lectures will not take place until early in July. "I sometimes sigh for a pair of roller skates," she said in an interview. "There are several lifetimes of work here. At first I was crushed by it all. But now I rejoice because I can never come to the end of it and there will always be something fresh and new."

The only disadvantage of being a woman in her present job, she finds, is that she has no pockets. She carries the two huge master keys of the museum, which she is supposed never to put down, on a long cord about her neck.

Prefers His Records

French Meteorologist Has Own Idea About Forecasting Weather

"Weather forecasting is easy, 'if . . . .'" said Olympne Mongeau, meteorologist for the French government near Cannes who has been visiting in Montreal. The necessary "if" consists of a weather record for at least a century applicable to the district for which the forecasting is to be done.

"I believe in the record of past weather," said Mr. Mongeau. "I would not cast discredit upon the scientific knowledge of groundhog watchers; nor would I say it is incorrect to count the nuts stored up by the squirrel. I have an open mind. But I do prefer my records."

Need More Planes

Liberals are with the government in its demands for more fighting planes for Great Britain, Sir Herbert Samuel, Liberal opposition leader in the House of Commons, said in a speech recently in Lancashire. "The Liberals cannot take the responsibility," he said, "of leaving the country inadequately defended against risks which are possible and may become realities."

To See Clearly

The greatest thing a human soul ever does in this world is to see something and tell what it saw in a plain way. Hundreds of people can talk for one who can think, but thousands can think for the one who can see. To see clearly is poetry, philosophy, and religion, all in one.—Ruskin.

DEATH OF H. T. JAMES

Horatio T. James, aged 92 years, whose death occurred June 2nd, was buried on Tuesday, June 4th from St. Cyprian's Church, where funeral services were held, Rev. T. H. Chapman officiating. Mr. James was born in Annapolis Royal, Nova Scotia, May 19th, 1843. For over sixty years he held a position as Postmaster at Lawrencetown, N.S. He is survived by two sons, H. H. James, Division Freight Agent, C.N.R., St. John, N.B., and Rev. Canon James, formerly of St. Stephens, Calgary. Also two daughters, Mrs. J. L. Walters, of Clive, Alberta, with whom he has made his home for the past seven years, and Miss Kathleen James, of Wareham, Mass.

TYPEWRITERS

See the Remington Portable number 5. This is the latest portable with everything on it that is on the large typewriters. Regular keyboard, two-color ribbon, tabular key, automatic ribbon reverse, etc. Built in a new style carrying case. Terms $5 down and 10 a month. Take one home for a demonstration. Your old machine taken in trade.

Re-built Typewriters from $25.00 up

1 OLIVER Typewriter (not the newest or fastest machine made, but strong and ideal for Cafes, etc.) In A1 shape $17.50

Ribbons for Remington, Underwood, etc. $1.00

CARBON PAPER, full size, 8½ by 13), pkg. 100 sheets $2.50
Pkg. 25 sheets ..... .75
10 sheets ..... .30

See me for typewriter paper, copy sheets, etc.

DISTRIBUTION THE DOMINION STORES WITHOUT WASTE

An Amazing achievement in the art of waving hair

MARVELOUS RESULTS

with the New Steam Revitalizing Process of Permanent Waving . .

- WAVES ANY HAIR—Will wave successfully dyed, bleached, fine and difficult hair. No discoloration with white or grey hair.
- REWAVING—The most successful method for rewaving any type of hair.
- REVITALIZES HAIR—Continuous controlled moist steam. No dry heat. No chemicals. Oil treatment and permanent wave in one.
- LESS TIME—Reduces by one-half the time ordinarily required for Croquignole Waves.
- GREATER COMFORT—No overhead weight. Fewer winding operations. Less time.
- SAFE—No electric heaters on the head. No dangerous chemicals to create steam. No possible injury to the hair.

APPRECIATION

Editor, Western Globe.

Sir:

While rather late in the season, may I take this opportunity to commend the Town on its policy of operating the skating rink under its own supervision. Last winter, due possibly to lack of tenders for the privilege of operating the rink, the Town decided to run it themselves under the management of Councillor David Hay and it seems to be the general opinion of the public that the rink was operated more satisfactorily than ever before. Those interested in skating got more than an even break while the younger generation got considerably more use of the ice to develop their hockey talent. Admission prices were reasonable and the cost of season tickets reduced to the minimum. While other towns show a deficit where the municipal rink is operated by the council, I am told that Lacombe, despite an unfavorable season in the midst of the depression, ended the year with a modest profit.

Since it has been shown that by efficient management a public institution can be operated for the benefit of the community to the satisfaction of all and without loss to the Town, it is hoped that the council may see its way clear to carry on again next season.

Thanking you, sir, for this space, I am

Yours very truly,
HOCKEY FAN

WORLD HAPPENINGS BRIEFLY TOLD

Glyn Bowden of the Brantford Expositor was chosen president of the Ontario-Quebec Newspaper Circulation Managers' Association after a two-day conference.

Overwhelming support was voted for the League of Nations in the peace ballot conducted in Britain. It was announced that of a total of 8,008,703 votes, 7,775,890 were in favor of the league.

Beaaborough, British Columbia—named for the governor-general—is the newest post office address in Canada. It is located in section 2, township 79, electoral district of Cariboo, B.C.

London buses, subways and street cars carried 46,000,000 passengers in the first four days of the week, opening the royal jubilee celebrations, easily beating any previous records.

Treasures once the property of the Russian imperial family and valued at $50,000 were reported stolen from Russian Imperial Art Treasures, Inc., in Rockefeller Centre by an unmasked gunman.

Martin Mooney, reporter for the New York American, was sentenced to 30 days in the workhouse and fined $250 for contempt of court in refusing to tell a grand jury where he obtained information for a series of newspaper articles on the police racket.

Londoners blinked in surprise at the sight of snow falling in the British capital in the middle of May. The unseasonable snowfall was accompanied by a cold wave which changed to a chilling 42 degrees the balmy springlike weather that had been marked by a temperature of 77 on May 6, when the royal jubilee was officially opened.

City of Calgary aldermen will be granted remuneration for their services, starting December 1, 1935. They will be paid at the rate of $5 per day for attendance at standing committees, to a maximum of $250 a year. The "vote for pay" was nine to four. The electorate since 1912 has defeated six plebiscites to pay aldermen.

Advances New Theory

Fruit Expert Thinks Eve's Apple May Have Been Peach

It now appears that Eve's "apple", which started the world's first family trouble, was a peach. Such was the theory advanced by Lloyd C. Stark, nurseryman, of Louisiana, Mo., and authority on fruit origins.

"In ancient days," said the nurseryman, "the Chinese believed eating a certain kind of peach would bring immorality and preserve the body from corruption. The peach tree was the "Tree of Knowledge" to the Chinese, and it may have been that the apple, eaten by Eve in the Garden of Eden, after all was the Persian apple, or, as it is known today, a peach."

The Fireproof Fireman

Special Asbestos Suit For Brigade In Sheffield, England

The fireproof fireman has arrived.

The Fire Brigade of Sheffield, England, has just taken delivery of a special asbestos suit, which will enable the fireman-wearer to walk with impunity in the fiercest flames. He will be able to effect rescue and salvage work unhampered by the heat.

Sheffield is the pioneer city in adopting the suit, which has been subjected to the most vigorous tests. Fire brigades in other parts of the country have been awaiting the outcome of the experiment with great interest.

Success After Ten Years

Invents Window That Admits Light And Air But Not Noise

A new sound-proof window, which admits light and air, but not noise, has been invented by E. T. Fisk, chairman of Amalgamated Wireless, Australia.

The design of the window, which has just undergone successful tests, is the outcome of ten years of acoustical experiments by Fisk. It employs the principle that most sounds can be reflected or absorbed if certain materials are applied to the surfaces which the sounds are striking.

Explore Upper Stratas

To Build Rocket That Will Ascend Distance Of 34 Miles

A Soviet stratosphere committee ordered the construction of a rocket expected to ascend 50 kilometres (about 34 miles) at a speed of 700 metres a second, or more than twice the speed of sound at a temperature of zero centigrade.

The rocket would take up automatic scientific instruments, which after reaching the maximum height would descend by parachutes.

Mistress—"This pie is absolutely burnt, Norah. Did you make it according to the instructions in the Cooking Book?"

Norah—"No, ma'am. It's my own creation."

Migration Of The Canada Goose

By Manly F. Miner

Much ink has been used by various writers and authors describing the origin and history of the Jack Miner Bird Sanctuary, but to me the big achievement there has been scarcely mentioned, namely, the catching and tagging of the Canada Goose to study its route of migration in both spring and fall, and to find where it nests and raises its young during the summer months.

It was in 1902 and 1903 that Jack Miner conceived the idea of establishing a bird sanctuary, the first of its kind in Canada, if not on the continent. But not until 1904 was work on the sanctuary actually started, that is, excavations made for ponds, several wing tipped live decoy geese placed on same, and corn spread plentifully around the banks. Ducks and geese, in a short time, found this to be a place of safety. Both the conservationists and shooters were back of the Jack Miner scheme, because the sanctuary, taking nothing from the shooters, constantly builds up the hunter's chances one mile away, the bird haven attracting many birds to the country. At the same time the birds became wise enough, when shot at from the property where they were unprotected, to fly back to their safety zone and haven of rest.

Eventually, the birds commenced to congregate on the sanctuary in large numbers. Jack Miner had no desire to shoot, but was anxious to study and find out where these feathered creatures spent each seasons of the year. On August 5th, 1909, he caught a duck and wrapped around its leg a piece of aluminum, on which was stamped his post office address. This was the first time Jack Miner had done such a thing and, incidentally, the record of same is the earliest on this continent. Thus not only is Jack Miner's sanctuary the first of its kind in North America, but the is the pioneer of tagging ducks.

A few months later, January 14th, 1910, the duck which had the honor of bearing the first tag was killed by W. E. Bray, of Anderson, N.C.

Naturally, great enthusiasm was caused, and the problem then confronting the owner of the sanctuary was how to build nets and other contrivances to catch the ducks without injuring them, in order that they might be tagged. He had no books or plans to which he could refer, for there was nothing of this kind in existence. So, after attracting the birds to the sanctuary, it fell to the lot of Jack Miner to invent a contrivance for catching the ducks. This he accomplished after many months of work, the result being that to-day there are hundreds and hundreds of ducks flying to and fro across the continent with his tag on. Nearly, every mail brings reports to the sanctuary from hunters of North America of the killing of tagged birds.

By 1914 Jack Miner had learned where the ducks, mourning doves, robins, etc., spend each season of the year. His next ambition was to catch and tag Canada Geese, the wildest of wild birds and practically the largest migratory waterfowl on the continent. He soon found that catching Canada Geese was a different undertaking compared with catching ducks. Although the geese, at this time, were coming to his sanctuary by the hundreds for food and protection, where neither rich nor poor could enter with a gun, to catch one of these birds for tagging purposes was another thing. They would not go near the network he had arranged for catching ducks. So after a year's constant study he contrived a method of having two ponds with a canal connecting them covered with network and a trap door at both ends. It was in 1915 that he caught his first wild Canada Goose to place an aluminum tag on its leg, giving the post office address of the owner of the sanctuary.

Jack Miner is by no means a religious fanatic, but he believes in the simple teachings of Christ and being anxious to make his tagging system complete and fascinating, a short verse of Scripture, such as "Have faith in God", "God is able", and so forth, is stamped on one side of his tag. In this way every person who gets one of his tagged birds get a verse of Scripture, which has more than doubled the interest of his tagging system.

In the spring of 1915 and just before the geese migrated for parts unknown in the North, he caught and tagged his first Canada Goose and liberated it again with the big flock from which it had been taken. Interest was aroused in the community as to who would kill and where. No one had even caught one before for tagging purposes, no one knew where they nested. All that was known was that they went north, and the settler in the most northern point in Canada always reported that "they went still farther north".

However, weeks and months rolled by and, to the surprise of everyone, early in October of the same year, Jack Miner received a letter from the Hudson Bay Company at Moose Factory, dated August 15th, 1915, containing this tag. The goose had been killed by an Indian in unsurveyed territory in the Hudson Bay district. This, naturally, interested the whole community, and, with real enthusiasm Jack Miner began to work on the improvement of his goose trap in order to catch geese by the hundreds. The next year it proved to be a decided success. Many more geese were trapped and, later on in the season, word was received from different points along the east side of Hudson's and James's Bays and as far as Baffin Land of tagged geese having been shot down.

On one occasion the Rev. W. G. Walton, an Anglican missionary, who had spent between 20 and 30 years among the Indians and Eskimos and who had never been out to civilization, came by canoe from Hudson's Bay to Cochrane. Taking the train there, he in due course arrived in Kingsville and the sanctuary. With him he brought a pocketful of tags, each of which bore a passage of Scripture and Jack Miner's post office address. He had collected these from the Indians and Eskimos all the way from Moose Factory, James Bay, along the east coast of Hudson's Bay and as far north as Baffin Land. The natives had brought them to him for interpretation of the verse of Scripture.

Through these tags, this devoted Christian missionary, together with the Hudson's Bay fur dealers, and the agents of Revillion Freres Fur Company, who have also co-operated to a great extent in collecting them from the natives, a lot of valuable information as to why these birds nest around the shores and islands of Hudson's Bay and Baffin Land instead of along the rivers and streams has been revealed to the civilized world. The geese arrive in that vicinity around the latter part of April and the first of May. The rivers and all fresh water are all frozen over at that season of the year, but the Hudson's Bay is opened up by the incoming ocean current and the geese prefer to nest where there is open water.

The tagging system has also revealed where they spend their winters. Each tag bears a date and it has been proven that very few geese which visit the sanctuary in the fall visit in the following spring, as practically all geese bearing fall tags are killed in the Middle States, along the Mississippi (East side) and towards the Gulf of Mexico, while geese which are tagged in the spring winter along the Atlantic coast, mostly around Currituck Sound, the geese which spend the winter along the Atlantic seaboard nest in the extreme northerly portion of Hudson's Bay and Baffin Land. When the fall comes and it turns cold, instead of migrating inland, they follow the ocean around by the way of Labrador, Newfoundland, and the New England coast, southward to Currituck Sound. But when March and April came, it is too warm in North Carolina for them. The Labrador coast and their summer quarters, however, are stil frozen over with zero temperature. The geese, therefore, migrate north from the Southern States to the Great Lake regions, where they congregate at this sanctuary, during the months of March and April.

There have been tagged nearly 13,000 geese since 1915, and year after year those that are not killed return to this protected property, wearing the bright aluminum bands around their legs. Last fall one hundred geese out of the 500 which stood on the ice of one of our ponds wore tags. The pond is only one acre in size and as I look at the map of North America in my old school geography, there are no words or anything small enough to represent in proportion one acre on it. Even the dot of a pencil would represent several miles. Yet the most remarkable thing about the migration of these birds is that year after year, as regular as the sun rises those that are not killed find their way back to the Jack Miner Bird Sanctuary, at Kingsville, Ontario, Canada.

The cork tree is stripped of its valuable outer bark, always during the summer, at intervals of about eight or nine years.

Store seeds in a cool place if you order them early. They are kept in better condition than in a warm room.

YOUTHFUL TRAVELLER

—Cunard White Star Photo.

Here is two-year-old Willie McManus, who travelled all the way from Glasgow to Canada by himself on the Anchor-Donaldson liner Athenia.

Willie arrived at Montreal none the worse for his adventure and seeming sorry to say "good-bye" to the Stewards and Stewardesses.

He was photographed at Montreal with his little suitcase just before leaving for Toronto where he will visit his aunt and grandmother who reside on Broadview Avenue, Toronto.

Well Cared For

President Of Catholic Children's Aid Society Says State Doing Great Service For Quintuplets

Executives of Catholic organizations in Toronto said they were not aware of a reported effort by Roman Catholic organizations to have the Dionne quintuplets returned to their parents, as outlined in a despatch from Ottawa. They said they had heard of the reported move only from newspapermen and knew nothing of plans to organize a campaign to nullify legislation which made the children wards of the king.

J. F. Boland, K.C., president of the Catholic Children's Aid Society of St. Vincent de Paul, said he thought the Ontario department of welfare "is apparently doing a great service, and I'm afraid the children would lose a lot of benefit if such a move were made. I think the parents of the quintuplets ought to be delighted that the state has stepped in to look after them with such apparent advantages."

Recipes For This Week

(By Betty Barclay)

BRAN SPOON BREAD

⅔ cup corn meal
2 cups milk
½ cup all-bran
3 eggs
1 tablespoon butter
3 tablespoons baking powder
3 teaspoons sugar
1 teaspoon salt

Stir cornmeal into 1½ cups milk and bring to a boil. Remove from fire, add all-bran and cool. Add well-beaten eggs, milk, butter, baking powder, sugar and salt. Bake at 400 degrees F., in earthenware pan (8 inch dia.) or pyrex for 25 to 30 minutes.

STUFFED EGGS

Shell hard cooked eggs and cut in halves lengthwise. Remove yolks and mash well. Add to mashed yolks a small amount of soft butter, finely chopped mustard cucumber pickle, sufficient of the mustard dressing from the pickle to moisten the egg yolks, and salt to taste. Fill egg whites with prepared mixture. Sprinkle lightly with paprika.

The giant Irish elk, now extinct, was the biggest member of the deer family that ever lived, with antlers that sometimes spread 11 feet.

Shorthand was invented in the days of the Romans.

"What do we do now?"

"Well, if the movies are right, miss, you sit on my knee."

—Sydney Bulletin, Sydney, Australia.

New Offensive Planned

Grasshoppers Killed In Larvae Stage Would Protect Farms

A new offensive against grasshoppers that would take attackers to the insects' permanent breeding grounds and prevent the recurring plagues by destroying the insects before they assumed outbreak proportions, was favored in a statement issued at Lethbridge by eminent entomologists of Canada and the United States.

The experts, following a six-day conference, reported the program in future would be to search out isolated areas where grasshoppers breed in years of no general infestation and start the poisoning campaign there.

The conference, outcome of appointment last year by the Dominion Government of a committee to draw up a scheme of permanent grasshopper control, felt such a plan would make farms safe from grasshopper plagues and farmers would not be occupied, as in the last two summers, scattering poison bait for weeks on end.

Increase Span Of Life

Old Age A Disease Which Science May Be Able To Retard

New evidence that man's normal span of life may be increased by medical science was offered to the American Psychiatric Association.

Studies of Alzheimer's disease, one form of premature old age, were declared by Doctors D. Rothschild of Foxborough, Mass., and J. Kasanin of Howard, R.I., to indicate old age may be a disease that medicine can retard.

Only about 100 cases of this particular kind of premature senility, which strikes between 40 and 60 years of age, have been reported. However, it is not uncommon, they added, since at the Foxborough, Mass., state hospital approximately four per cent. of all cases in which autopsies were performed were found to have been suffering from the disease.

In a few of the cases described the two physicians said toxic influences—poisons in the system—seemed to be significant.

SPECIAL OFFER 10c.

SPRING FASHION BOOK

For the next two weeks the latest Fashion Book (regular 20c) will be sold at 10c when ordered with a pattern.

—See Mail Address Below—

877

JACKET DRESS IN SIZES TO 48!

By Ellen Worth

Extremely attractive, slimming and comfortable to wear.

There are so many things about this smart jacket dress which the fuller figure will find helpful and charming.

Its open V-neckline and prettily arranged bodice closing are exceedingly slimming.

Yellow and white tub silk print was used for it, while the cross-over bodice was plain yellow.

Checked handkerchief linen, eyelet batiste, dotted voile, striped handkerchief finished lawn, etc., are other suitable fabrics so cool and smart looking.

Style No. 877 is designed for sizes 36, 38, 40, 42, 44, 46 and 48 inches bust. Size 36 requires 3¾ yards of 39-inch material with 1¾ yards of 39-inch contrasting.

Patterns 20c each. Address mail orders to: Pattern Department, Winnipeg Newspaper Union, 175 McDermot Ave. E., Winnipeg.

The Spring Fashion Magazine is better than ever. Entirely illustrated in color you will find it a very stimulating fashion edition. There are clothes for cruising and clothes to brighten the lives of stay-at-homes. Many delightful little models for the smaller members of the family. Of course, patterns are obtainable for the designs illustrated. Send for your copy to-day. the price is 20 cents.

Competition Is Keen

Three Nations Seeking For Supremacy In Train Speed

Competition between the leading nations for the world's train speed record is becoming more and more intense.

The lead changes hands almost daily as streamlined and Diesel-engined locomotives set new records.

Facts and figures show that at present Britain runs the fastest steam express train in the world, and that Germany has the fastest train in existence, a Diesel electric express.

Recently, a British engine, seven years old, pulled a train 268 miles in three hours and 51 minutes, an average of 69.6 miles an hour, and touched at one time the world record for steam of 108 miles an hour.

At the moment a triangular fight between Germany, Italy and Britain, with, respectively, electric, rail-car and steam trains, is on.

Germany is reported to be contemplating something faster than the Flying Hamburger; Italy is developing speedy rail-cars; and Britain is pinning her faith to steam, plus stream-lining.

Apart from the Cheltenham Flier, which daily covers the 77¼ miles from Swindon to London in 65 minutes, Britain holds the world's record for long non-stop journeys. In the summer the record is held by the Flying Scotsman, London to Edinburgh, 392¼ miles, while throughout the year the Royal Scot runs non-stop between Carlisle and London, 299 miles.

The general speed-up of train services in Britain has, within the last three years, resulted in a total saving of 49,673 minutes daily. There are 31 British expresses scheduled for part of their journeys at start-to-stop speeds of 60 m.p.h. or over, and 53 at 58 m.p.h. or over.

Calgary Was Represented

Scout Was On Navy Duty In Australia During Jamboree

Calgary, which has managed to send representatives to many of the international boy scout jamborees, was not without its delegate at the recent Australian jamboree at Melbourne, where 10,000 scouts from the southern hemisphere gathered. Officially, Calgary had no representative among the small Canadian contingent which went to Melbourne and only the visit of the Duke of Gloucester to the Melbourne centennial celebration gave a Calgary scout the opportunity of participating.

Among the crew of H.M.S. Sussex, which carried His Royal Highness, was Deep Sea Scout Malcolm McInnes, who was a wireless operator signed on for particular duty in connection with direct personal messages to Prince Henry throughout the voyage. During H.M.S. Sussex's stay in port, Scout McInnes was able to obtain leave to attend the jamboree and still proud of his home town, registered as from Calgary on joining the Canadian camp.

Young McInnes, son of P. S. McInnes, a C.P.R. land inspector at Wainwright, was born in Calgary and was educated on the North Hill. A member of the Eighth (Crescent Heights) group and rising to the rank of patrol leader, he was always interested in radio and signalling work. Leaving Calgary in 1932 to join the royal navy, his early training stood him in good stead in making rapid progress as a wireless operator.

Still actively interested in the movement, he is a member of the Deep Sea Scouts, a branch which takes in rover scouts engaged aboard the merchant marine and royal navy.

Cheque Tossed Aside

"Advertising Circular" Given To Children As A Plaything

Clarence Lorber's heart still skips a beat each time he recalls how near losing a $7,200 Kentucky Derby cheque he came when his wife mistook it for "another advertising circular" and tossed it aside as a plaything for the children.

Lorber, rural driver for a bakery in Davenport, Iowa, had purchased a $1 Derby pool ticket. He drew Nellie Flag and the filly romped home fourth. It was all to be a surprise at home.

As he was dressing, Lorber noticed his children playing "bank". The paper, his wife replied to his inquiry, "is just another one of those circular schemes."

Picking up the "circular", Lorber discovered a genuine cheque, drawn on a San Francisco bank for $7,200, and payable to himself! How the money will be spent will be decided "after the shock wears off," Mr. and Mrs. Lorber said.

Sky Train Successful

The first international sky train flew safely to Havana, the 'plane and two gliders covering the 90 miles between Key West, Florida, and the Cuban capital in one hour and forty-five minutes.

The average child acquires 80 per cent. of his education through his eyes, says the U.S. National Society for the Prevention of Blindness.

London received its first successful cargo of meat from Australia in 1880.

Banff's Famous Hot Springs

Radio-Active Waters Have Acquired A World-Wide Reputation

Among the chief attractions of Banff, in Banff National Park, Alberta, are the hot sulphur springs which bubble from the side of Sulphur mountain. They are numbered among the most radio-active waters on the North American continent and have acquired a world-wide reputation by reason of their curative properties. These springs were known to the Indians who inhabited the region for generations prior to their discovery by the white man around 1880. There are five chief springs at Banff, namely, the Upper springs, the Kidney springs, the Middle springs, and the Cave and Basin springs.

Development of these springs by the National Parks Service of the Department of the Interior has taken place at the Upper Hot Springs and at the Cave and Basin Springs. The former are located two and a half miles from Banff on the slopes of Sulphur mountain. A bath-house and pool have been constructed at these springs. The waters of the 60 foot by 30 foot pool have a temperature of 112 degrees Fahrenheit. The bath-house contains steam rooms, tubs, plunges, hot and cold sprays, and rest rooms. At the Cave and Basin springs, there are two swimming pools, with waters of varying temperatures, and dressing rooms for visitors.

Running Close Race

Great Britain Slightly Ahead Of Germany In Wireless Licenses

Great Britain and Germany are running a hot race for the highest number of wireless licenses.

On January 31, according to figures of the International Broadcasting Union, Britain had issued 6,688,727 licenses to radio fans, while Germany's total was 6,439,323. Soviet Russia was a bad third with 2,323,000, and France fourth with 1,755,946.

The development of broadcasting in other European countries still is comparatively backward, according to the union's figures. Italy's total number of radio fans was estimated at 430,000, Spain's 213,000 and Portugal's only 29,283. Belgium has 620,000, Switzerland 366,286 and Sweden 733,190.

Japan takes the lead in eastern countries with a total of 1,897,398 licenses issued.

Moved Court By Air

Australian Judge Used 'Plane To Speed Up Justice

Judge Wells of the Assize Court at Port Darwin, Australia, recently used an airplane to speed up justice. Instead of summoning all concerned in a case to Port Darwin the judge moved his court by air to Alice Spring, 1,000 miles distant across barren country. With him he took the crown prosecutor and the officials of his court. By his actions Judge Wells saved the long trek to Port Darwin of a large number of witnesses, police officers and prisoners.

Bees Wintered Well

Both in Canada and the United States bees came through the winter in good condition, according to reports. Outdoor wintered bees were confined to their hives for three months though there were occasions when the cluster could move onto fresh honey. It is long continued spells of zero and sub-zero weather that prove disastrous to bees.

Knew His Limitations

An employer was interviewing a youth who had applied for a position.

"What do you know of this business?" he asked.

"Nothing," replied the youth.

"You are engaged," said the chief. "You are already ahead of some of my staff who have been here years and have not yet learned what you know to begin with."

Happy And Busy

Although his back is paralyzed and he has been bedridden for eight years, Eddie Williams, 25, is happy—and busy. A large board on his bed serves as a work bench. There he repairs bicycles, makes toys and does "little odd jobs" for the neighbors in Wilson.

Girl (after filling out blank)—"Is that quite clear?"

Inquisitive Clerk — "No. Who's Fred?"

Invented Crash Finds

Amy Mollison Minus Driver's License

Mrs. Amy Johnson Mollison, noted woman flyer, was fined 10 shillings (about $2.40) in Bridlington, Eng., on a charge of driving an automobile without a license.

A policeman who investigated an accident April 19 in which a motorcycle rider was killed in a collision with Mrs. Mollison's car, said she had been unable to find her license and that when it was produced two days later it was found to have expired. Mrs. Mollison testified her secretary had neglected to renew it.

CHAPTER I.

Dad was worried about something. All through dinner Nancy had been aware of it. Not once had he taken part in the conversation, and though outwardly unchanged (the girl was proud of her well-groomed, youthful-looking father) he seemed, somehow, miles and miles away. When even Jack's spirited account of Exeter's victory at the game that afternoon quite failed to rouse him, both aunts glanced up, puzzled; and Mother, saying: "Let's have our coffee in the living room," went to her husband and touched his shoulder.

"What's wrong, Jim? Has something happened?"

Dad turned quickly, as if startled at the question.

"Something has," he admitted, pulling himself together with what seemed to all of them a tremendous effort, "and since the little boy's away, it's a good time to tell you. Don't bother with coffee tonight, Margaret. Come into the other room and close the door. I—I must get it over."

But after all, James Nelson did not have to break the news. It was his sister, always quick to grasp a situation, who asked as they gathered in the living room: "Did that crash in the market to-day hit you very hard, Jim?"

Her brother nodded—wet his lips.

"I—I am down and out, Louise," he answered; but Nancy saw that he was looking at her mother. And Mother was looking at him, strangely. She seemed, thought the girl, stunned for just a moment.

"Down and out," James Nelson repeated grimly, still staring at his wife with eyes that had grown haggard. "After all these years the firm's gone under. I think—I fear, Margaret, that we'll have to begin all over again."

"Well," countered Mother, coming suddenly to life, "why not?" She sat down on the davenport beside Dad, and put an arm across his shoulders. "Tell us, dear, just how bad everything is."

He drew a relieved breath, as if the worst were over.

"Not so bad as it might be, perhaps. I can't go into details now; but at least, I'm not in debt to others. That's the thought I held onto when I looked at the crowd of desperate men in the stock exchange this afternoon—a terrible scene. Their faces—well, I wish I could forget them. I went back to the office and just sat there thinking—trying to see my way. I'm fifty-six. It's not easy to start again at that age, Margaret. This house is yours; but we can't afford to live here. What hurts me most is that the hardest part will fall on you—all of you, I mean. The servants, too; they'll have to go. And—and Nance was to have had her debut so soon!"

"Oh, forget it!" The girl spoke flippantly because she couldn't have spoken otherwise without crying.

"For my part," observed Jack, "I should think Sis would be relieved to get rid of all that fuss. I'll get a job, Dad. I never was keen on college anyway. I was only going so's not to disappoint you. And I won't need Mary Ann if I go to work. She'll bring in—something."

"Mary Ann" was the boy's beloved roadster. James Nelson's eyes brightened suspiciously as he said: "You're good kids, both of you. I feel better already to have you meet this blow with so much pluck. I knew I could count on Mother; and Phil's too young to feel the hurt. As for you two," (turning to his own sister and his wife's), "you're safe, thank heaven! That was my first grain of comfort—relief that I'd put your money into good, dependable bonds."

"For mercy's sake!" broke in Aunt Louise. "Why didn't you tell us sooner? If Judy's savings and mine are still intact, things aren't so bad. Even with that small capital you can start again, Jim."

"If you think I'd touch a penny—" he began, when Aunt Judy interrupted:

"Why shouldn't you? What would I have now, Jim, if you hadn't managed my affairs so carefully all these years? This crash in the market is no fault of yours. Make him see sense, Margaret. Of course he'll take our money if it will help."

Said Mother: "Perhaps he won't need to if we sell this house."

"This is no time to sell real estate," Dad told her, "but I've no doubt we can rent it at a good price. And if we move to a small apartment, or even into the suburbs for a while, so as to cut all possible expense, it will give me a chance to look around."

"See here!" spoke up Aunt Judy as if inspired, "the place at Edgemere is vacant now. Why not go there and have no rent to pay?"

Judith Hale had inherited the family home at her father's death some fifteen years before; but Edgemere was more than twenty miles from the city, and as no one spoke for just a moment, she questioned: "Could you stand commuting, Louise? It would mean a pretty early start for you."

"I ought to be able to stand it as well as Jim; or I could stay in town and go home for the week-ends. But I'm thinking about Nance. It seems hard to give up a debut and be torn from all one's young friends at the same time."

This was a surprise, not only to Nancy but to her elders. It was seldom that Louise Nelson, who taught English in a fashionable girls' school, displayed sympathy of this sort. She considered the debut a foolish, unnecessary display, and had said so repeatedly. She wanted Nancy to go to college and fit herself to be a teacher. It was amazing that in this time of stress she should give thought to her niece's disappointment, and the girl said:

"Don't worry about me. If I'm not to come out in a blaze of glory, Aunt Louise, I'd almost rather be away somewhere."

"Why shouldn't Nance go to work?" asked Jack abruptly. "She's almost nineteen. Lots of girls her age—"

"Oh, see here!" broke in her father, "I guess we'll manage without that. I think your plan about Edgemere is a good one, Judith, unless it sounds too hard for Margaret. But of course I'd pay the rent like any other tenant."

"Oh, no you wouldn't!" Aunt Judy bristled with indignation. "It's a pity if I'm not allowed to help after all you and Margaret have done for me. Don't I know that when I came here years ago you'd never have thought of engaging a mother's helper if you hadn't known I was lonely and adored the children? And later Margaret pretended to need a housekeeper, so I'd feel I wasn't imposing on you to stay longer. Take the old house and use it, Jim. I've always felt it was Margaret's as much as mine. Don't say the word rent to me again!"

She was so obviously wrought up that Dad laughed a little, and Mother said: "Honestly, Judith, since we must go somewhere, it will seem heaven to go back home. But whatever we decide, Louise must do what's best for her. As for Jack, since this term's tuition at school is already paid, he may as well finish, I suppose."

"Wouldn't they give the money back, Dad?" questioned the boy.

James Nelson glanced at his sister. the inner workings of a private school being more in her line than his; and she responded: "In a case like this I believe they'd refund most of it; though if Jack wants to finish out the year I'll finance his expenses."

"And relinquish that European trip next summer?" countered her brother.

She colored, as if guilty of some misdeed.

"Oh, what's a European trip when I've been before? I'd hate to have Jack change schools, when he's done so well; and you've set your heart on his going to Harvard, too. Let him stay where he is."

The boy arose, standing with his back to the fire as he looked down at them. During the past year he had grown an appalling number of inches and like others who shoot up with such rapidity, was far too thin. He said, soberly: "With all due respect to you, Aunt Louise, I think I have a right to decide this thing myself. I'd feel like a slacker to stay at an expensive school when Dad has lost his money and Nance is giving up her party. You say I'm doing well in my studies, but it's only because I'm crammed, and I'm sick of cramming. I'm no bright star, and you all know it. It's a shame to disappoint you, Dad, but I'm not going to college—that is," he added, "if I can help myself."

His father answered: "But I wanted a son to graduate from my Alma Mater, boy."

"Send Phil then. Phil's smart. He'll be a credit to you. Why, that kid knows more now than I did when I entered Exeter! I'm the dumbest member of the Nelson family, but I bet I can get a job that'll pay my board. And if you ask me, so can Sis, if she's a mind to try.

Aunt Judy had been listening attentively to her nephew's words. Now she said: "He's right. I think, about leaving Exeter, Jim. Let him work for a while. He can finish school a year later if all goes well; and the boy will be happier to feel that he's helping now."

Said Jack, throwing her a grateful smile: "I can always count on 'our shield and defender'!" And Aunt Judy continued:

"It's really queer how things happen. It just came over me that I'm out of a job, myself!"

"The very idea!" This was Mother. "While we've a roof over our heads, Judy, you've got one too—especially when the roof in question is your own property!"

Her sister laughed.

"But you see, Margaret, I feel as Jack does. I'd rather be a help than a burden; and while he was talking I remember that last week Caroline Spear told me she was hunting a suitable person to take her girls abroad. She said: 'Want the job, Judith? They'll wear you to shreds but I'll pay well for it.' Of course I laughed at the idea. I thought with Nancy's debut and everything, that I'd be needed here. But I'll call Caroline tonight and see if she still wants me. I always get along with young folks, and if they keep me sprinting maybe I'll reduce."

"Reduce!" Jack whistled expressively. "I wager that by the time you return to the land of the free, Aunt Judy, there'll be nothing left of you 'but just the bones and skin,' like that small, red hen you used to read about to us when we were kids. Those Spear twins are wild babies, believe me. Why don't they go to Europe by themselves?"

"That's what I asked Caroline. Girls go everwhere alone these days. But it seems that their grandfather is financing the trip and stipulated that they take a chaperon."

"Chaperon!" burst from Nancy. "I didn't know they existed any more."

"They do," smiled her aunt. "You see one before you now, my dear, unless I'm too late to get the job. Don't look so mournful, Jim. It's a wonderful chance to get a trip abroad."

But her gay tone did not deceive them. Even Jack knew that Aunt Judy didn't want to go abroad with two restless young adolescents like the Spears. Dad said, after a moment:

"Well, we can't decide everything to-night, and I'm dead tired. The thought of all these changes makes me a bit sick. But I do appreciate—" He stopped, because, they all saw, it was impossible to go on; and Mother broke in with her unfailing tact:

"Let's get to bed, Jim. It's been a frightful day for you, but after a good sleep things will look brighter. As for me, I really believe it will be a relief to go back to Edgemere and drop all this 'keeping up with Lizzie'."

She arose, a courageous smile curving her lips; but her hand sought Nancy's with a little squeeze which said as plainly as any words: "I understand, daughter; but we mustn't let him guess our disappointment."

Darkness descended on the household early that night, but not rest. Plans and more plans whirled through James Nelson's tired head for hours. Margaret, thinking him asleep, lay very still, pondering many things—Nance mostly. This change was going to be hard for the girl. Louise had said they were spoiling her, and perhaps they had; but she was their only daughter. No knowing what life would bring her later on, and they'd so wanted her to have a happy youth—a carefree youth. Parties. Gaiety. Good times. And Nancy was pretty—astonishingly pretty. Somewhow she seemed made for just that life. Already a row of new and lovely gowns hung in her closet awaiting the thrilling days ahead. Moving cautiously, the girl's mother wiped away a tear.

In the room above Louise Nelson lay staring at a patch of brightness on the ceiling, drifting in from a street light far below. She, too, was thinking about Nancy. "If only they'd taught her to be something besides a butterfly," she told herself, "this blow wouldn't come so hard. Not that the child hasn't got good courage, though. It showed to-night when she kept a stiff upper lip while her house of cards tumbled to pieces before her eyes. That's the pioneer spirit my father used to talk about, showing up in a softer generation, I dare say. But she can't do a thing to help. Not a thing. No training whatever. Not that she'd have had much time for training at her age; but I doubt if the girl has ever made a bed!"

Across the hall Aunt Judy was fighting home-sickness. She adored her family. It was hard for her to leave them even for a week-end; and here she was destined to spend six months in Europe with those "crazy" Spear girls. It was all settled. In her relief at the suggestion Mrs. Spear had almost cheered over the telephone.

"I suppose," Aunt Judy scolded herself, "that any one would say I was in luck. A trip abroad and a good salary just when it's needed. But the truth is, I'd rather be at Edgemere cooking for the family! I do think they're all wonderful. Margaret's a trump. She's so ambitious for Nancy, yet she never whimpered. And Jack! He didn't consider anything except helping his father. Offered to give up Mary Ann, and he—Why, the boy worships that car! And Nancy!" (Aunt Judy winked back the tears.) "I wanted to cry for her, poor darling! She's been so thrilled and excited over this debut. . . ."

As for the girl herself, she lay on her beautiful four-poster trying to assemble her shattered world. It seemed incredible that such a thing could happen—to her. It just couldn't be true. "Why, Edgemere," she mused, "is—is the jumping-off place. One might as well be buried alive. I don't see how even Mother can endure it, especially with no Aunt Judy to help out. Come to think of it, there's only one bathroom for the entire family!" She threw a glance toward the door that led to her own whitetiled bath; and, as if she could see into the closet that lay beyond, a vision of the new gowns hanging there, waiting her entrance into what Jack called "the social swirl," rose up before her, and the girl's eyes misted.

"I'll never wear them now," she pondered unhappily. "And my white fur evening wrap! I wish I hadn't saved it for the great event. Maybe the shop will take it back, though. I'll never use it in—in Edgemere. . . . I wish I could get a job like Jack; but what good am I? Aunt Louise was right. . . . I can't earn my salt, not to mention my silk stockings. . . . What'll the girls say, and the boys, when they hear the news? . . . Not that it matters. . . . I'd like to help him, but—but I'm just useless. . . . Can't even earn my board. . . . No one would pay me. . . ."

Nance turned her head. The door was opening cautiously, and as she switched on a bedside light the girl saw her brother, clad in pajamas and a bathrobe.

"What on earth do you want this time of night?" she questioned. "Is the house a-fire?"

Without answering, Jack closed the two windows noiselessly and sat down on the foot of Nancy's bed, drawing his knees up under his chin.

"Sis," he began in a mysterious whisper, "I've got a perfectly corking scheme. Have—have you forgotten Cousin Columbine's proposition?"

CHAPTER II.

Cousin Columbine's proposition! Nancy had not given it a thought since the week before when Jack, home from school for an unexpected Sunday, had met the postman at the door and brought a letter into the dining room where the family was at dinner.

"It looks like a long-winded screed from Dad's venerable relative in Colorado," the boy observed, "You read it aloud, Aunt Lou."

He tossed the missive deftly across the table where it landed within an inch of his aunt's plate. She said, regarding the address: "But it's for your father."

Dad smiled.

"Read on, my dear. It can't be very private. The old lady hasn't written for a long time. What can she want?"

"To spend her remaining days with us, perhaps," opined Jack fearfully as he sat down and his aunt drew some finely written pages from the envelope. "What's she say, Aunt Lou?"

"Give me time to find out, please," she returned with a touch of sarcasm; and then read: "Dear Cousin James: It is some months since any news of my far-distant relatives has reached me; and now I am writing to ask what I trust will not be regarded as a favor—"

"What'd I say?" broke in Jack. "She wants to live with us! I felt something—something ominous creep down my spine when the postman handed me that letter. Go on. Quick."

Louise Nelson, always impatient at interruptions, paused for an aggravating moment before continuing: "'. . . a favor. I suppose I am getting old—'"

"Old is right!" burst irrepressibly from Jack again. "Why, she's a pioneer, isn't she? One of those covered wagon people who—"

"Sh!" warned his mother; while her sister-in-law, throwing the boy what in the vernacular of his generation is known as "a hard look," continued: "'. . . for I find it more difficult to do for myself, and the neighbors feel that I should no longer remain alone at night in this large mansion'."

Louise Nelson paused for just a moment as if awaiting her nephew's comment, but as none was forthcoming, she went on: "'I had hoped to secure the services of Mary Taylor, the daughter of our good postmaster; but she has other plans, for which, on the whole, I am relieved. Girls are not what they were in my day, but after all, blood will tell, so I am asking your daughter Nancy to start for Colorado as soon as—'"

"Well, talk of nerve!"

This was Jack once more, but no one thought to reprove him for the interruption. Even his Aunt Louise appeared unconscious of it. Dad sat suddenly erect. Mother's mouth opened, and stayed that way a minute. Aunt Judy bristled: "What's the woman thinking of?"—while Nancy herself was staring at them all in blank amazement.

"Me?" she gasped, after a speechless moment.

"The very idea!" said Mother, finding her voice.

"For Pete's sake, read on," commanded Jack; and as they all leaned forward in sudden interest Louise Nelson said:

"'Let's see, where was I? Oh, here's the place. '. . . as soon as possible. Though I know you are well fixed financially, my dear cousin, I shall insist on paying the girl's travelling expenses. I also agree to give her twenty-five dollars every month, and her duties will not be arduous'."

"They'd better not be, if the old lady expects to get 'em done—by Nance," observed Jack dryly; and his aunt continued:

"'As I believe I have mentioned in previous communications, my good neighbor, Aurora Tubbs, does my cooking and house cleaning, though on the latter subject her ideas and my own not infrequently clash, I should expect your daughter to dust the mansion neatly every morning; do her own washing—'"

At this point, unable to restrain himself a moment longer, Jack gave vent to a sort of war whoop; and his aunt declared in exasperation: "Really, Jack, if you can't keep still until I finish, some one else may have the pleasure of reading this ridiculous proposal."

"Oh, go on, Louise," placated Dad. "What else does she expect of Nance for that munificent salary?"

"Strict obedience, I judge. The letter says: 'If she goes out of an evening I should expect her to be in not later than nine-thirty, my bedtime; and though I prefer that she should entertain no young men callers, if such a thing occurs they must leave at the same hour.'"

Aunt Louise paused, amused eyes meeting Nancy's as Jack chuckled: "No boy friends for our Nance? That settles the matter, Dad. Just wire your antiquated cousin that your charming daughter doesn't qualify for the position."

"Keep still," begged Nancy. "I never heard anything so—so wild in my whole life!"

Louise Nelson was smiling now. "You are to read the daily paper to Cousin Columbine, Nance," she said. "And then to this: 'If handy with her needle I should want the girl to do a bit of dressmaking now and then. She would get supper on Thursdays (Aurora's evening off), and in case of illness on my part it might be necessary for her to wait upon me. That is all, I think—' And it's enough," declared Aunt Louise, interrupting herself this time. "I judge they haven't met the servant problem at Pine Ridge, Colorado!"

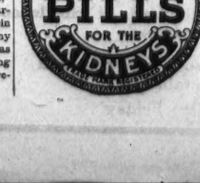

"What she wants is a slave," asserted Jack. "I can't quite see my decorative sister being nurse, dressmaker and cook to a prehistoric old lady one hundred-odd years old. Can you, Dad?"

LAME BACK

Gin Pills give prompt relief from backache resulting from deranged kidneys. They soothe and heal irritated tissues and assist the kidneys in their function of eliminating poisonous waste matter from the system. 248

HEALTH MEANS CHARM AND HAPPINESS

Sparkling eyes and smiling lips speak of health and vitality. Clear skin attracts. The healthy active girl is both happy and popular.

Perhaps you are not really ill yet when the day's work is done you are too tired to enter into the good times that other women enjoy. For extra energy, try Lydia E. Pinkham's Vegetable Compound. It tones up your general health. Gives you more pep—more charm.

Remember that 98 out of 100 women report benefit. Let it help you too.

Show No Change

Scientists Say Jellyfish Same As 250,000,000 Years Ago

Jellyfish which turned into stone an estimated 250,000,000 years ago have been found by Cornell University scientists near Cortland, N.Y.

This discovery, which has been announced, appears effectively to wipe out the basis of the evolutionary jokes that man may have descended from an ancient jellyfish. For the Cornell discovery shows jellyfish have not changed appreciably in 250,000,000 years. Horses took only 40,000,000 years to evolve from little, five-toed creatures, and in a period of much less than 1,000,000 years prehistoric man or a creature closely resembling modern humans, rose rapidly up the scale of development.

The fossil jellyfish are about the size of saucers. The concentric rings of stone which came from mineralization of their bodies indicate how little they differed from the jellyfish which float ashore in all the oceans to-day.

They apparently had even then the stinging, nettle-like tentacles which pain swimmers of to-day.

Receives Medal From Prince

Lieutenant Rescues Man During Storm At Great Peril To Himself

Award for the bravest deed of the year, the Stanhope Gold Medal of the Royal Humane Society was presented at York House by the Prince of Wales to Lieut. Hugh Richardson of the H.M.S. Wolfhound. Richardson saved the life of a sailor who had fallen overboard during a gale in Lamlash Bay, Isle of Arran.

The rescue was carried out in pitch blackness in the early hours of a stormy winter morning.

Edmund Archer, aged 19, was crossing the deck when a huge wave broke over the destroyer and swept him over the side.

Lieutenant Richardson heard the cry "Man overboard," and placing a luminous lifebelt over his head, dived from the bridge into the sea.

He put the lifebuoy round Archer, but was himself swept half a mile to sea and it was some time before a boat found him.

Civilians Being Trained

Germany Not Taking Any Chances On Air Raids

Germany is busily preparing itself against air raids, according to a well-informed British observer who recently stopped in Brussels, Belgium, on his way from Berlin. The whole civil population, he declared, are being trained in what to do if an "air war" starts. Berlin is now well on the way towards "air impregnability," with an abundance of gas and fire-proof protection cellars. "Air protection" exercises are taking place nightly in different districts of the capital. A huge excavation is being made in the centre of Berlin. It is generally believed that huge cellars are being built there to serve as garages in peace time, and as an air protection for high Government officials in the event of war. One hotel in Munich advertises an air protection cellar among its modern conveniences.

Royal Empire Medal

Sir Wilfred Grenfell Is Honored As Distinguished Benefactor

The council of the Royal Empire Society recently awarded its gold medal to Sir Wilfred Grenfell, Labrador's distinguished benefactor. The award was made "in recognition of his services to the empire and the excellence of his book, 'The Romance of Labrador'."

"In addition to his work on behalf of Labrador, Sir Wilfred is well known in the world of medicine," said the council. "His work for the people in the land of his adoption has marked him as one of the pioneers of the empire."

Since 1892, Sir Wilfred has been engaged in missionary and welfare work in bleak Labrador. He has established hospitals, nursing stations, orphanages and schools. He carries medical aid to lonely outposts along the coast in an annual cruise.

Alberta Cattle Shipped To States

An $8,000 consignment of high-grade Alberta cattle has been shipped to Washington and Oregon to create new blood in cattle in United States drouth areas where many of the better class animals have been killed off, it was announced at Calgary. The shipment contained many prize-winning animals and a top price of $185 was received, it was reported.

Share For Everyone

There is always something to do if we are willing to do it, and do not insist on doing something else. Many think there is nothing for them to do because they are more eager to choose their work than to do it. There is a share of life for every one; there is work for every hand.

Customer—"You're a young man to be left in charge of a chemist's shop. Have you a diploma?"

Assistant—"No madam; but we have a preparation of our own that's just as good."

Little Helps For This Week

"Enter thou into the joy of thy Lord." Matthew 25:23.

"Serving the Lord, rejoicing in hope." Romans 11:12.

If our love were but more simple,
We would take Him at His word;
And our lives would be all sunshine
In the Sweetness of our Lord.

What would it be to love a Being absolutely lovely, to be able to give our whole existence, every thought, every act, every desire to the adored One, to know that He accepts it all, and loves us in return as only God can love. This happiness grows forever. The larger our nature becomes the wider our scope of thought, the stronger our will, and the more fervent our affections. Every sacrifice resolved on opens wide the gate, every sacrifice accomplished is a step towards the paradise within. Soon it will be no transitory glimpse, no rapture of a day to be followed by clouds and coldness. Let us labor, and pray, and wait, and the intervals of human frailty shall grow shorter and less dark, the days of our delight in God longer and brighter, till at last life shall be nought but His love, our eyes shall never grow dim, His smile never turn away.

This Tip Was Different

American Tourist Left Expensive Car With London Chauffeur

M. Eastwood, a London chauffeur, was given an automobile as a tip but he cannot sell it. Eastwood was engaged by an American family who wanted to see Britain. They asked him to buy a car for them. He bought a long, low-built tourer, capable of 90 miles an hour. It held six people in comfort. It took the American family all over Britain. Then, their visit over, they returned to America and left the car as a present, for chauffeur Eastwood. But when he came to sell it he could find nobody willing to buy. The car is so much above 1935 pockets that nobody will offer him enough money for it.

Europe's Tallest King

King Haakon VII. of Norway is the tallest king in Europe—six feet four inches tall. He is not a Norwegian, but a Dane, and his real name is not Haakon, but Carl. He was chosen to rule Norway when that country broke away from Sweden. He was then the second son of the King of Denmark. One reason for his being chosen was that he has always been an outstanding athlete, a true test of popularity with Norsemen.

"WOULD NOT BE WITHOUT SASKASAL"

Says Regina Woman Indigestion Gone, Can Eat Anything

Read this letter: "For several years I had been troubled with indigestion and could eat very few foods which agreed with me. A friend of mine suggested that I try Saskasal, which I did, and it has entirely cured me and now I can eat anything. I would not be without a bottle of Saskasal in my home, and I hope others may benefit as I have done when they know of your wonderful remedy in Saskasal." Saskasal is Nature's own Mineral Salts. Its alkaline action neutralizes over-acidity in the blood and thus makes it a valuable natural remedy in all cases of Constipation, Rheumatism, Liver and Kidney troubles, Indigestion, Biliousness. 144

A. M. CAMPBELL, Ltd. | Lacombe.

VICTIMS OF STUPIDITY

—x—

Far up in the jungles of the Amazon there is one of the most romantic railroads in the world; a railroad according to grim legends, whose construction cost one human life for every tie in its track.

The railroad is a silent testimony to the power of the human race to triumph over the most amazing natural obstacles. Built to carry Bolivian rubber around the rapids in the Madeira and Mamore rivers, it runs through fever-infested jungles from eastern Bolivie to the town of Porto Velho, in Brazil.

Ocean steamers can dock here, more than a thousand miles from the mouth of the Amazon; the railroad was built to give Bolivia something resembling a seaport.

Its construction took years to build, thousands of lives and millions of dollars. The engineering obstacles were many; the region was more unhealthy than Panama in its worst days, what with yellow fever, tropical malaria, and other maladies.

That the road could be built at all was remarkable evidence of mankind's ability to cope with nature at her most hostile.

But although men can defeat nature, they can't beat their own blindnesses. What jungle and microbe could not do, human folly has done. This railroad has triumphed over natural obstacles only to succumb to the depression.

Writing in Harper's magazine Earl Hanson tells how this railroad has fallen on evil days.

"The rubber business is on the rocks," he writes. "The railroad does not pay expenses. Two trains a month are now run each way. Budgets are pinched alarmingly on the maintenance and replacement side.

"Let the process continue and the road will eventually be abandoned. Towns full of white men will be left stranded, and Indianization, now already going on, will be speeded up. Everything is dying and slipping back into the jungle."

And there in miniature, you have a telling picture of what is wrong with the world today.

As far as nature is concerned, we have won our age-old fight. We can build practically anything we can imagine we can whip the jungle at its worst, take ocean ships to the middle of South American, and connect them with a railroad in a spot where even to build a footpath would have seemed absolutely impossible a generation ago.

But we can't seem to find a way to make things work after we get them built.

Our technical progress—great enough to make a desert bloom like the rose any time we choose—is at the mercy of our inability to master the economies of modern society. We have conquered practically everything except our own stupidity.

The one thing that keeps us from making a garden spot of the whole world is the simple fact that we are standing in our own way. The decline of the dearly-bought South American railroad is perfect example.

LADIES' GOLF CLUB

—x—

Mrs. R. McCaugherty presides over the fortunes of the Lacombe Ladies' Golf Club for 1935. Other officers include Mrs. H. Teare, Vice-President; Mrs. L. Robson, Secretary-Treasurer; Miss Vivian Pratt and Miss L. McClary, Tournament Committee; Mrs. C .D. Marble and Mrs. S. J. Boyd; House Committee and Mrs. A. M. Campbell and Mrs. Geo. Johnston, Tea Committee.

The Club is in a flourishing condition and has a large enthusiastic membership. Bridge and Golf Teas are held in the Club House every Friday, and a Mixed Tournament is planned for Wednesday, June 12th; also a luncheon is to be held on Saturday, June 8th in honor of Miss Margaret E. Morrison, whose marriage is announced to take place the latter part of June.

The natural beauty of its location, which is within easy walking distance of Town, combined with the allurement of competitive sport played with congenial companions, make the Lacombe course a centre of attraction of all classes during the summer months, and some of the quite young generation follow the game with as much enthusiastic interest as the seasoned members.

BALLOT BOXES BEING CLEANED

—x—

Edmonton—Although the election date has not yet been set by the provincial government, John D. Hunt, chief electoral officer is going to be ready when the time comes to facilitate the conduct of the voting.

He is having all the ballot boxes locks and keys cleaned with gasoline and is having as much preliminary printing as possible carried out, such as instructions to enumerators and other matters.

While Mr. Hunt declares he knows no more about the election date than anybody else just yet, he feels there is much in being prepared and as much early work as possible is being done.
